1 REPORT OF THE BOARD OF DIRECTORS

1.1 Financial result and financing

Fingrid's consolidated financial statements have been drawn up in accordance with the International Financial Reporting Standards (IFRS). Unless otherwise indicated, the figures in parentheses refer to the same period of the previous year.

Fingrid's consolidated financial statements have been drawn up in accordance with the same accounting principles as in 2019.

The Group's turnover was EUR 682.5 (789.4) million. Grid service income decreased to EUR 373.6 (385.0) million, due to the low energy consumption during the unseasonably warm winter months. Electricity consumption in Finland totalled 80.9 (86.1) terawatt hours during the year. Imbalance power sales also decreased year-on-year, to EUR 260.8 (346.7) million, due to the low electricity prices. Cross-border transmission income from the connection between Finland and Russia decreased, to EUR 6.9 (11.6) million, due to a lower transmission volume, affected by the low area price compared with north-western Russia. As a result of the transmission situation in the Baltic Sea region, ITC income increased to EUR 17.1 (14.4) million. Other operating income declined to EUR 2.4 (4.2) million.

The Group's total costs amounted to EUR 569.3 (651.6) million. Imbalance power costs decreased, due to low electricity prices, and totalled EUR 234.4 (323.5) million. Loss power costs amounted to EUR 52.6 (53.9) million. The volume of loss power grew slightly, while the price of loss power procurement decreased. The realised average price of loss power procurement was EUR 38.03 (39.57) per megawatt hour. The cost of reserves to safeguard the transmission system security increased to EUR 63.5 (55.9) million, mainly due to the increased hours procured for frequency restoration reserves (FRR). Depreciation amounted to EUR 98.5 (97.8) million and grid maintenance costs to EUR 23.6 (21.6) million. Personnel costs increased to EUR 31.2 (26.4) million because of the higher headcount in response to a growing workload, both domestically and in international cooperation.

The Group's operating profit was EUR 118.4 (115.5) million. To recognise changes in the fair value of electricity derivatives and the currency derivatives related to capital expenditure and other operating expenses, EUR 3.0 (-26.6) million was recorded in operating profit. The Group's profit before taxes was EUR 113.3 (105.8) million. Profit for the financial year was EUR 94.0 (84.6) million. The equity ratio was 27.4 (32.0) per cent at the end of the year.

Fingrid's total capital expenditure in 2020 amounted to EUR 169.7 (126.9) million. This included a total of EUR 137.3 (103.4) million invested in the transmission grid and EUR 9.6 (5.5) million for reserve power. ICT investments amounted to EUR 21.1 (17.0) million. The costliest single ICT investment was the centralised information exchange system for electricity retail markets, datahub, which the company is currently building. A total of EUR 4.5 (3.4) million was used for R&D projects during the year under review.

The parent company's turnover was EUR 679.8 (786.2) million, profit for the financial year EUR 136.0 (148.1) million and distributable funds EUR 186.8 million.

Based on the company's own calculations, the return according to the regulatory model that governs grid operations amounts to a deficit of around EUR 30 million for 2020. The size of the deficit was also positively affected by cost efficiency and quality incentives. The Energy Authority

has confirmed a cumulative deficit of EUR 28.4 million for the previous regulatory period, 2016–2019.

Turnover and other operating income, € million

	Jan- Dec/20	Jan- Dec/19	July- Dec/20	July- Dec/19
Grid service revenue	373.6	385.0	173.7	175.7
Sales of imbalance power	260.8	346.7	139.9	171.6
Cross-border transmission income	6.9	11.6	5.4	6.2
Peak load capacity income*	12.9	14.1	3.6	4.8
ITC income	17.1	14.4	9.0	7.6
Other turnover	11.1	17.4	7.5	8.3
Other operating income	2.4	4.2	1.9	3.6
Turnover and other income total	684.8	793.6	341.0	377.7

Costs, € million

	Jan- Dec/20	Jan- Dec/19	July- Dec/20	July- Dec/19
Purchase of imbalance power	234.4	323.5	128.2	160.9
Loss power costs	52.6	53.9	28.1	28.2
Depreciation	98.5	97.8	49.4	49.1
Cost of reserves	63.5	55.9	30.1	29.3

Grid maintenance costs	23.6	21.6	12.9	13.8
Cost of peak load capacity*	12.6	13.7	3.5	4.4
ITC charges	10.8	15.0	6.1	7.3
Other costs	42.1	43.8	23.2	21.4
Costs total	569.3	651.6	296.3	324.7

Operating profit excluding the change in the fair value of commodity derivatives

	115.4	142.1	44.5	53.1
--	--------------	--------------	-------------	-------------

Operating profit of Group, IFRS

	118.4	115.5	63.2	48.7
--	--------------	--------------	-------------	-------------

* Peak load capacity income and costs are related to the securing of sufficient electricity supply during peak consumption hours in compliance with the Finnish Peak Load Capacity Act.

Fingrid's credit rating remained high, reflecting the company's strong overall financial situation and debt service capacity. The Group's net financial costs were EUR 4.0 (10.1) million, including EUR 0.7 million in interest expenses on the lease liabilities booked into the balance sheet. The Group's

net interest expenses on loans during the year totalled EUR 13.3 (14.7) million. The change in the fair value of financial derivatives was EUR 3.8 million positive (EUR 8.1 million positive). The Group's finance income was increased during the review period by an EUR 8.4 million dividend attributable to the sale of the Nord Pool shares.

Interest-bearing borrowings totalled EUR 1,174.9 (1,120.0) million, of which non-current borrowings accounted for EUR 1,032.8 (884.7) million and current borrowings for EUR 142.1 (235.3) million. At the end of the year, the company's interest-bearing borrowings included a total of EUR 31.2 million in lease liabilities, consisting of EUR 2.3 million in short-term liabilities, to be paid within a year.

The company's liquidity remained good. Cash and cash equivalents and other financial assets totalled EUR 125.9 (82.8) million on. The company additionally has an undrawn committed revolving credit facility of EUR 300 million to secure liquidity (until 11 December 2022) and a total of EUR 225 million in committed and uncommitted bilateral facility arrangements with banks.

The counterparty risk arising from derivative contracts relating to financing was EUR 26.2 (22.4) million. Fingrid's foreign exchange and commodity price risks were hedged.

Fingrid has credit rating service agreements with S&P Global Ratings (S&P) and Fitch Ratings (Fitch). The credit ratings valid on 31 December 2020 remained high and were as follows:

- S&P's rating for Fingrid's unsecured senior debt and long-term company rating at 'AA-' and the short-term company rating at 'A-1+', with a stable outlook.
- Fitch's rating for Fingrid's unsecured senior debt at 'A+', the long-term company rating at 'A', and 'F1' for the short-term company rating, with a stable outlook.

1.2 Operations

1.2.1 Strategy

Fingrid Oyj is Finland's transmission system operator, owned by the State of Finland and Finnish pension and insurance companies. Fingrid's mission is to secure a reliable supply of electricity for our customers and entire society cost effectively in all circumstances, and to help shape the clean, market-oriented power system of the future.

Fingrid's operations are based on Finnish and EU legislation. The Finnish Electricity Market Act requires us to develop the main grid, maintain a balance between electricity consumption and generation, and improve the preconditions for a well-functioning electricity market. The EU Electricity Regulation obligates cooperation within ENTSO-E, the European Network of Transmission System Operators of Electricity, and also regionally within the Baltic Sea region, to promote the functioning of the internal market in electricity. Fingrid participates in the drawing up and implementation of the market, operating and connection codes and the proposals prescribed in them. Fingrid's operations are supervised and regulated by the Energy Authority, which has granted the company a licence for transmission grid operations.

The business model describes the most important material and immaterial resources at the company's disposal that are necessary for operational processes. The impact of Fingrid's operations and the significant added value they generate show in various ways throughout Finnish society. The operational model is described in the business review and on Fingrid website.

Vision:

Fingrid's vision is to be an exemplary transmission system operator and a highly esteemed energy influencer.

Values:

Our values guide the work of our professional community and lay a solid foundation for our corporate culture. Fingrid is open, fair, efficient and responsible in all our operations.

Way of working:

Fingrid's corporate culture is open, collaborative and renewing, and complies with good governance practices. The company is well known for expertise. Operations are developed for the long term and in cooperation with our customers and other stakeholders. Everyone is treated impartially and with respect. Fingrid achieves the bold and ambitious goals set for our operations. High quality and efficiency are achieved by combining our core expertise with that of the best players in the world. Fingrid operates responsibly, effectively and openly, and in this way earns the trust of customers and stakeholders.

Fingrid's strategy is implemented through four perspectives: Customers & Society, Finance, Internal Processes, and Personnel & Expertise. According to the approach chosen by Fingrid for implementing its strategy, all four perspectives are equal and are implemented and developed in a mutually balanced way. The strategic perspectives play a key role in the day-to-day management of the company.

Fingrid is a specialist organisation in which the objective of the Personnel & Expertise perspective is to maintain and develop an open, social, renewing and high-performing work community.

The perspective of Internal Processes consists of the company's three operational processes:

- Ensuring transmission capacity: investments and maintenance tasks are carried out safely and efficiently at the right time.
- System security management: the main grid is operated proactively and reliably such that the power system maintains its balance at all times.
- Promoting the electricity market: the electricity market is maintained and developed actively.

The objective of the Finance perspective is to operate cost-effectively, to enable affordable service pricing, and create value for shareholders.

In terms of customers and society, the company aims to provide a secure supply of electricity and a well-functioning electricity market from society's point of view, and meets the customers' needs with adequate services and affordable prices.

Fingrid has made the following strategic choices:

Focusing on the core mission

- Fingrid excels in accomplishing its core mission in a changing operating environment. The company does not aim to expand into new businesses or to participate in competitive business.

Customer focus

- Fingrid develops its business operations and operating models actively, focusing on customers, and mindful of society's interests as a whole.

World-class efficiency

- Fingrid innovatively utilises the best technologies and opportunities enabled by digitalisation. The necessary core competencies are maintained in-house. Fingrid cooperates with the best partners.

Market focus

- Fingrid applies a market-oriented approach in all areas because we believe that well-functioning markets will produce the best and most innovative solutions.

Openness to integration

- Fingrid actively fosters the integration of the electricity markets in Europe and the Baltic Sea region, while always being mindful of Finland's national interests.

Security and responsibility

- Fingrid secures the existing good level of system security in a power system under transformation. Corporate responsibility and safety are highlighted in all activities.

1.2.2 Customers

Fingrid provides grid services and electricity market services to its customers: utility companies, electricity-consuming industry and electricity market operators. Fingrid's operations are largely based on fulfilling statutory duties, and they are conducted with a maximum customer focus, impartially and on equal terms.

Grid services secure reliable transmission of electricity in the main grid in accordance with the needs of utility companies and energy intensive industry. The transmission reliability rate broke the all-time record in 2020. Significant quantities of wind power capacity are currently under planning and construction. We received around 160 enquiries about connecting to the main grid, totalling tens of thousands of megawatts in capacity. The connection agreements signed during the year enable the grid connection of roughly 1,800 MW of new wind power capacity. We also received inquiries about the grid connection of new types of consumption.

Fingrid's electricity market services provide the electricity market operators with a unified price area for wholesale electricity trading in Finland as well as the benefits of the open European electricity markets. In 2020, the full cross-border transmission capacity was utilised for Finland's electricity imports from Sweden. The transmission capacity did not meet the needs of the market, but our cross-border connections functioned very well.

According to a study carried out by the European Network of Transmission System Operators for Electricity (ENTSO-E) in 2019, the transmission tariffs for electricity in the Finnish transmission system are the third lowest in Europe, when compared with transmission grids of a similar size. The comparison included 36 countries. In 2021, the grid service fees will be maintained at the previous year's level.

According to the customer satisfaction survey conducted in autumn 2020, the customers' trust in Fingrid remains strong and our work for the benefit of society at large is considered a particular strength. More than half of the customers felt that the company's operations had improved during the past year. According to the survey, customers perceive Fingrid as an open and cooperative player who works for the benefit of the whole of society and treats its customers impartially. Our

customers gave us a Net Promoter Score (NPS) of 45, a good result for a natural monopoly in a business-to-business industry.

Work on the online service portal, "My Fingrid", continued as a part of overall customer service development. In the portal, customers can view various metrics such as transmission metering, invoicing, reactive power, and disturbance and unavailability data.

Two major Fingrid Current customer events and several info sessions and webinars targeted at smaller audiences were arranged in 2020.

1.2.3 Main Grid

In this decade, Fingrid will invest two billion euros in Finnish grid networks and substations. The main grid must be reinforced because achieving the goal of a climate neutral Finland by 2035 requires a significant increase in emission-free electricity production and consumption. Wind power connections have in particular increased the need for investments.

We are working on a grid vision, aimed to create an understanding of the development needs in the main transmission grid (400 kV and 220 kV) and proposed solutions for the long term.

Roughly 10 kilometres of new transmission lines were completed and 570 kilometres were under construction. 250 kilometres of transmission lines were under general planning. Fingrid's ongoing major electricity transmission projects included the construction of a transmission line from Oulu to Petäjävesi, the so-called 'Forest Line'. The construction of a third AC connection to Sweden is under preparation to boost the functioning of international electricity markets. Another project currently in the planning phase is the upgrading of the Oulu–Lappeenranta connection, or 'Lake Line'.

Twelve new or expanded substations were completed and 22 were under construction.

- New wind power generation with a total capacity of roughly 4,000 megawatts are planned in the area between Kristinestad, Vaasa and Seinäjoki. Haapajärvi and the neighbouring municipalities, in central Finland, are planning new wind power projects totalling more than 1,000 megawatts. Fingrid made investment decisions to build a substation at Pysäysperä in the municipality of Haapajärvi and another substation at Kärppiö in the municipality of Teuva. The total capital expenditure will be roughly EUR 55 million. The planned commissioning dates for the substations are in the summer of 2022.
- A 400/110-kilovolt substation will be modernised at Tammisto in Vantaa. The investment will improve the system security of electricity supply in the Helsinki region. The Tammisto substation is one of the stations supplying electricity to the capital region and a key node of the main grid. The new substation will be commissioned in late 2022.
- The 110-kilovolt Luukkala substation in Lappeenranta, which plays an important role for electricity transmission in the South Karelia and Lappeenranta area, will be modernised. The station is the starting point of several grid ring connections and also supplies the city of Lappeenranta as well as local industries with electricity. The project will be completed in the autumn of 2023.

- The Jylkkä substation, located in Kalajoki, will be expanded and fitted out with a third transformer, making the substation Finland's most important connection point for wind energy. The project will be completed during 2022.
- During the period under review, investment decisions were made concerning the refurbishments of the substation located in Kangasala and the Isohaara substation located in Keminmaa.
- A 400/110-kilovolt substation system will be expanded and modernised in Alajärvi. New wind power projects amounting to roughly 2000 megawatts is currently under construction or planning in the vicinity of Alajärvi. The interconnections for the new capacity require upgrades in the main grid. The project is due for completion in 2023.
- The 220/110-kilovolt Kellarijänkä substation is under construction in Kemijärvi to prepare for future wind power interconnections. The new substation will also promote the development of distribution networks and improve system security in the area. It will also enable the interconnection of a new biorefinery project under planning in the area. The project will be completed during 2023.

Fingrid owns ten reserve power plants with a constant start-up readiness of 15 minutes. In 2020, we completed a refurbishment project at the Vanaja reserve power plant, which included replacing components such as the fuel oil and extinguishing systems. The main objective of the upgrade was improving environmental and fire safety.

Fingrid carried out aerial photography of all the transmission lines during the summer of 2020. This means approximately 12,000 kilometres of power lines, making it the most extensive imaging project of Finland's grid system ever completed. The aerial photography will bring the documentation of the grid up to date, while also helping to assess the condition of the grid and enable planning of future maintenance work.

Despite the coronavirus pandemic, Fingrid's investments and maintenance work proceeded according to planned schedules and budgets.

Fingrid scored top results in ITOMS (The International Transmission Operations & Maintenance Study) and was the only TSO to achieve a Top Performer nomination both in the transmission line and substation maintenance categories. ITOMS looks into the effectiveness of maintenance based on criteria such as maintenance costs and disturbance statistics.

1.2.4 Power system

Electricity consumption in Finland amounted to 80.9 (86.1) terawatt hours in 2020. Fingrid transmitted a total of 68.4 (68.7) terawatt hours of electricity in its grid, representing 77.9 (76.0) per cent of the total electricity transmission in Finland (consumption and inter-TSO).

The imported and domestic production capacity was sufficient to meet the peak demand of the year. The electricity consumption peaked at 12,388 (14,542) MWh/h on Friday 28 February between 8 and 9 a.m., with Finland's electricity production contributing 9,849 MWh/h and the

remaining 2,539 MWh/h being imported. The area price of electricity on the day-ahead market in Finland was €46.98/MWh during the peak consumption hour.

The water resources in the Nordic countries were at a good level, which led to lower year-on-year wholesale electricity prices. The electricity transmitted between Finland and Sweden mostly consisted of large imports from Sweden to Finland. In 2020, 18.8 (16.3) terawatt hours of electricity was imported from Sweden to Finland, and 0.3 (0.5) terawatt hours was exported from Finland to Sweden. The electricity transmissions between Finland and Estonia were dominated by exports from Finland to Estonia, totalling 6.6 (3.8) terawatt hours. Electricity transmission from Russia to Finland amounted to 3.0 (7.6) terawatt hours. In contrast to the previous year, electricity was also exported from Finland to Russia on a few occasions. In 2020, 0.3 (0.2) terawatt hours of electricity was imported from Norway to Finland.

The transmission reliability rate of the main grid was the best ever in 2020, at 99.99995% (99.9998%). An outage in a connection point in the grid caused by a disturbance in Fingrid's electricity network lasted an average of 0.51 (4.3) minutes, which is equal to the ten-year average. The calculated cost of the disturbances (regulatory outage costs) to consumer customers was EUR 0.9 (2.7) million. If rapid reclosures are included, the cost of disturbances amounts to EUR 3.2 million.

The availability and reliability of Fingrid's HVDC transmission links remained very high. Disturbance-clearing and fault elimination measures were highly successful, and the connections were quickly restored and made available to the market.

The volume of transmission losses in the main grid increased somewhat from the level of the previous year, amounting to 1.5 (1.3) terawatt hours. This was 1.8 (1.5) per cent of the total volume of transmitted electricity. The annual variation of losses is affected by the Nordic electricity production situation, such as the volume of hydropower. Losses have been minimised by keeping the voltage of the transmission grid as high as possible and by making grid investments and equipment procurements that promote energy efficiency.

Counter trade	Jan-Dec/20	Jan-Dec/19	July-Dec/20	July-Dec/19
Counter-trade between Finland and Sweden, €M	0.1	0.1	0.0	0.0
Counter-trade between Finland and Estonia, €M	0.2	0.5	0.1	0.1
Counter-trade between Finland's internal connections, €M	0.4	0.3	0.3	0.2
Total counter-trade, €M	0.7	0.9	0.4	0.4

Reserves required to maintain the power balance of the power system were procured from Finland, other Nordic countries, Estonia and Russia. The availability of reserves was good, with the exception of the spring flooding season, which limited the availability of hydropower plants for reserve maintenance purposes. Consumption is increasingly active in various reserve resources, particularly in the frequency-controlled disturbance reserve. Countertrade costs arise from, among other things, transmission grid disturbances and problem situations. Countertrade costs amounted to only EUR 0.7 (0.9) million.

Power system operation	Jan-Dec/20	Jan-Dec/19	July-Dec/20	July-Dec/19
Electricity consumption in Finland TWh	80.9	86.1	39.2	41.5

Electricity transmission Finland - Russia				
Imports from Russia TWh	3.0	7.6	1.8	3.4

1.2.5 Electricity market

The average market price of spot electricity on the power exchange (Nordic system price) was EUR10.93 (38.94) per megawatt hour. The wholesale area prices on the Nordic and European electricity markets were the lowest in market history. The price differences between price areas were significant, both among the Nordic price areas and on the Central European markets. The price decrease in the Nordic market area was primarily caused by extremely high hydropower production volumes and warm weather. The day-ahead market prices fell to negative figures several times in the Nordic countries. The impact of the coronavirus pandemic on the production and consumption of electricity and on the electricity market was fairly insignificant in the Nordic market area.

Large quantities of electricity were imported to Finland, based on market incentives, throughout the year under review. Finland has been dependent on imported electricity, as the domestic production capacity does not meet the demand. The area prices in Finland and Sweden diverged in situations where the transmission capacity between the countries was insufficient to meet the demand. Our cross-border connections functioned very well, however, and we succeeded in making all the existing capacity available to the markets.

Fingrid's congestion income from cross-border transmission lines totalled EUR 146.7 (73.0) million, of which the cross-border transmission lines between Finland and Sweden accounted for EUR 122.7 (65.5) million. The links between Finland and Estonia generated EUR 24.0 (7.5) million in congestion income. A total of EUR 219.1 million in congestion income remained unused at the end of 2020 and will be used, in accordance with the regulatory guidance, for the Forest Line

connection currently under construction and other grid investments that will improve the functioning of the electricity market.

Electricity market	Jan-Dec/20	Jan-Dec/19	July-Dec/20	July-Dec/19
Nordic system price, average €/MWh	10.93	38.94	11.32	36.70
Area price Finland, average €/MWh	28.02	44.04	32.76	45.63
Congestion income between Finland and Sweden, € million*	245.4	131.0	141.4	101.0
Congestion hours between Finland and Sweden %**	62.8	40.1	63.8	54.4
Congestion income between Finland and Estonia, € million*	48.1	15.0	27.4	4.0
Congestion hours between Finland and Estonia %	32.9	11.8	32.0	10.4

* The congestion income between Finland and Sweden and between Finland and Estonia is divided equally between the relevant TSOs. The income and costs of the transmission connections are presented in the tables under 'Financial result'. Congestion income is used for investments aimed at eliminating the cause of congestion.

** The calculation of a congestion hour between Finland and Sweden refers to an hour during which Finland's day-ahead area price differs from Sweden's SE1 or SE3 area price.

To increase the cross-border transmission capacity between Finland and Sweden, a third AC connection to Sweden is currently being prepared, in cooperation with the Swedish TSO. The increased transmission capacity will help to decrease the price disparities between the countries. The transmission link is due for completion in 2025. The Forest Line connection currently under construction will substantially increase the North–South transmission capacity necessary for the Finnish power system and help to keep Finland as a single price area in electricity trading. The project is due for completion in 2022.

Competitive trading between the Nordic power exchanges started in June 2020. The competition between power exchanges will increase the number of alternative trading services available to electricity market operators. The competition makes it possible for more than one Nominated Electricity Market Operator to connect with the European market coupling on the day-ahead market in the Nordic price areas.

Fingrid has several ongoing projects for developing the electricity market:

- The Nordic Balancing Model and the related project to implement a 15-minute imbalance settlement period (ISP) will revamp the Nordic balancing power and reserve power marketplaces, modify the balancing model and adopt the 15-min ISP.
- A new methodology of transmission capacity calculation will be adopted in the Nordic countries to improve the capacity allocation for the market. RSC, the Nordic TSOs' joint operational planning office in Copenhagen, will procure the necessary new calculation software.

- A centralised information exchange platform for the retail market of electricity, datahub, is scheduled to go live in February 2022. The datahub will contain data from about 3.7 million accounting points in Finland. Close cooperation with the entire sector continued in 2020, and the datahub was gradually made available to the entire sector for testing in June 2020.
- Fingrid's development of flexibility market solutions has progressed within the INTERFACE and OneNet projects funded from the EU's Horizon2020 research programme. Fingrid participated in the preparations for a follow-up INTERFACE project, and the work resulted in the OneNet project, which started in the autumn, also under Horizon2020 funding. In the next few years, the OneNet partners and Fingrid will jointly develop methodologies related to the utilisation of flexibilities, in order to better account for the flexibility needs of the power system also in the longer term.

1.3 Corporate responsibility

Fingrid Oyj employed 408 (380) persons, including temporary employees, at the end of the year. The number of permanent personnel was 363 (338).

At the end of the year, 23 (24) per cent of the personnel were women and 77 (76) per cent were men. The average age of the personnel was 44 (44).

Fingrid is an expert organisation where the most important resource is the knowledge and skills of the personnel. In an expert organisation, work can be organised autonomously and independently, while also supporting the team and common goals. This concept of specialists focusing on their area of expertise was also successful in 2020, in the exceptional circumstances, when most of the experts were forced to transfer to remote work almost full-time due to the COVID-19 pandemic.

The necessary know-how was secured in 'Fingrid Academy', which offered coaching for supervisors, project management coaching, the Loikka training programme for increasing specialists' communication and engagement skills, language training and unit-specific coaching mainly related to change, work community and emotional skills.

Fingrid is charged with a mission of high responsibility and great societal significance: to ensure the entire population of Finland has electricity available to them and to carry out the grid investments necessary for a clean power system. We support particularly the UN's global Sustainable Development Goals (SDGs) related to climate actions, energy and infrastructure. Fingrid's corporate responsibility performance is reported according to the Global Reporting Initiative framework and the data is verified by an independent external party. In 2020, the topics important to Fingrid's business activities and corporate responsibility, in addition to successfully fulfilling the company's core mission, included areas such as safety and security, procurement practices, stakeholder trust, financial result, Code of Conduct, and taking care of the work community. The implementation of corporate responsibility was steered by goals focused on these essential topics, which was also reflected in the President & CEO's and senior management's remuneration. The importance of Fingrid executives' corporate responsibility goals was particularly highlighted. Compliance and corporate responsibility management is integrated with Fingrid's management system and risk management practices, using the corporate strategy as a starting point. Fingrid's Board of Directors updated and approved the company's Code of Conduct, monitored the responsibility of operations, and ensured that corporate responsibility management is properly organised and integrated into business operations. The President & CEO and the heads of functions were each responsible for compliance management and corporate responsibility issues within their areas of responsibility.

Fingrid is committed to the United Nations' Global Compact initiative, and its Code of Conduct is in line with the initiative's principles on human rights, labour, the environment and anti-corruption. The Code of Conduct was updated in 2020 to match with the company's updated values, and the requirement to promote diversity was included in the Code of Conduct. Fingrid guarantees equal opportunities, rights and treatment to all employees and complies with the principles of non-discrimination, equality and diversity in its personnel policy. Despite the coronavirus pandemic, the personnel's well-being was good and work proceeded as planned. A coronavirus group consisting of personnel representatives kept track of official coronavirus guidelines and instructed the work community on safe work. The company scored an eNPS of 71 and overall satisfaction of 87/100 in the Siqni employee survey. The grade for responsible operations in the personnel survey was 4.6 out of 5. The company's customers gave us a net promoter score (cNPS) of 45. Fingrid has made a pledge to support human rights and included it in the Code of Conduct. To ensure that we correctly understand our human rights impacts, Fingrid has carried out an overall assessment in compliance with the due diligence process recommended in the UN's Guiding Principles on Business and Human Rights. Human rights are included in the corporate responsibility commitment Fingrid expects from its suppliers and their realisation is monitored using a risk-based approach. Contract terms are additionally applied to the use of subcontractors and workforce, and to occupational safety and environmental matters. In 2020, ten Fingrid worksites were audited to verify compliance with contractor obligations, occupational safety and environmental management. In international goods sourcing, third-party supplier audits were carried out at 15 production plants, and six follow-up audits were carried out in order to rectify any non-compliances observed during these or earlier audits.

Fingrid seeks to improve its occupational safety culture and achieve its zero accidents goal. In 2020, the Executive Management Group approved Fingrid's policy and goals for occupational safety and health management. The scope of the OHS management system based on the ISO 45001 standard consists of the functions and units working with grid construction and maintenance. Fingrid's own personnel had 2 (0) lost-time accidents and suppliers' personnel 14 (7). 5 (2) of the lost-time accidents resulted in an absence from work of more than 30 days or in a permanent handicap/bodily injury and were classified as serious. The suppliers' and Fingrid's combined lost time injury frequency (LTIF) increased from the previous year to 11.1 (5.3) per million worked hours.

The transmission grid under Fingrid's responsibility must have sufficient geographical coverage and transmission capacity to enable Finland to reach its climate goals. The other significant environmental impacts caused by the company's operations are related to landscape changes and land use restrictions, impacts on natural habitats, the climate impact of power losses during electricity transmission, possible contingencies at substations and reserve power plants, and the consumption of natural resources and the climate impact during grid construction and maintenance. From a climate risk viewpoint, Fingrid prepares for the physical risks of extreme weather phenomena, which are becoming more common and more powerful, in the construction and use of the grid. The transition risk, i.e. the transfer to a clean power system, is being prepared for by building the main grid rapidly enough to achieve the climate targets, which means proactive environmental impact assessment, successful stakeholder engagement, fast project permit processes and effective project management. Fingrid's carbon dioxide emissions in 2020 totalled approximately 118,000 carbon dioxide equivalent tonnes. In 2020, the total wind power capacity connected to Fingrid's main grid amounted to roughly 296 megawatts, which will indirectly cut emissions worth around 72,000 carbon dioxide equivalent tonnes in the coming years. In addition, Fingrid concluded during the year agreements on connecting a total of approximately 1,800 megawatts of wind power production to the electricity grid. Once realised, this will lead to a substantial positive climate impact, indirectly avoiding emissions worth around 450,000 million carbon dioxide equivalent tonnes. A real-time factor for electricity consumed (year 2020 average:

72 g CO₂/kWh) was adopted in the emissions reporting; the data is published on Fingrid's website as a part of the open electricity market data.

Landowners and other stakeholders were taken into account when building and maintaining the grid, and environmental impacts were mitigated at all life-cycle stages in accordance with Fingrid's land use and environmental policy. Similarly to occupational safety standards, outsourced contractors and service providers were required to commit to environmentally responsible operating practices through contract terms, training and audits. The environmental impact assessment (EIA) procedure was applied to the transmission line projects with the most significant impacts, with on-going assessments in four projects during 2020. Fingrid received an expropriation permit decision for one transmission line construction project. The service providers who carry out maintenance work and trim vegetation along power line right-of-ways were also instructed to take landowners and natural sites into account and to take proper care of waste and chemicals. Safe utilisation of transmission line right-of-ways was promoted by offering landowners information and initial funding for managing right-of-way areas as heritage environments with high biodiversity value. Materials from work sites were recycled as efficiently as possible when building new grid sections and substations or dismantling old structures. No significant environmental deviations occurred in grid building and maintenance in 2020. The total volume of waste was approximately 10,800 (13,920) tonnes, of which 95 (98) per cent was repurposed and 62 (89) per cent was recycled.

The ISO 14001 environmental management systems of Fingrid's reserve power plants were recertified in 2020. The reserve power plants are necessary in serious power system disturbances, subject to an environmental permit and covered by the EU's emissions trading scheme. A total of 5,020 (5,142) units (tCO₂) of emission allowances were returned, 100 per cent of which consisted of purchased emission right units. Fingrid has not been granted free-of-charge emission rights for the emissions trade period 2013–2020. A total of 4,000 units of emission allowances were purchased in 2020. Emissions trading had minor financial significance for Fingrid.

Fingrid reports on its tax footprint and refrains from any special arrangements to minimise taxes. Fingrid does not provide any direct or indirect support to political activities. Fingrid's Code of Conduct includes a prohibition on money laundering and corruption, such as blackmail and bribery. In addition, Fingrid has several operating models in place to prevent corruption, bribery and other financial irregularities, related to, among other things, the use of funds, accepting gifts and hospitality, verification of commitments, counterparty verification and sanctions screening. In 2020, the personnel and external stakeholders had a confidential and independent whistle-blower channel available to them, and two reports of suspected misconduct were received through it. One of these did not lead to follow-up measures and in the other case, corrective actions were decided on. No breaches of anti-competition laws, complaints related to the privacy of private individuals, incidents of bribery or other corruption, human rights violations or discrimination incidents occurred in Fingrid's operations.

More information on corporate responsibility work is available in the corporate responsibility and sustainable development report to be published on 31 March 2021.

1.4 Internal control and risk management

1.4.1 Organisation of internal control

Fingrid's internal control is an integral part of the company's operations and addresses all those operating methods and procedures whose objective it is to ensure:

- effective and profitable operations in line with the company's strategy,
- the reliability and integrity of the company's financial and management information,
- protection of the company's assets,
- compliance with the applicable legislation, guidelines, regulations, agreements and the company's own governance and operating guidelines, and
- a high standard of risk management.

Risk management is planned holistically, with the objective of comprehensively identifying, assessing, monitoring and safeguarding the company's operations, the environment, personnel and assets from various threats and risks.

Continuity management is a part of risk management. Its objective is to improve the organisation's capacity to prepare and to react in the best possible way should risks occur, and to ensure the continuity of operations in such situations.

Further information on internal control, risk management and the foremost risks and factors of uncertainty is available on the company's website.

Board of Directors

The company's Board of Directors is responsible for organising internal control and risk management, and it approves the principles of internal control and risk management every two years or more often, if required. The Board defines the company's strategic risks and related management procedures as part of the company's strategy and action plan and monitors their implementation. The Board decides on the operating model for the company's internal audit. The Board regularly receives internal audit and financial audit reports as well as a status update at least once a year on the strategic risks, major business risks and continuity threats relating to the company's operations, and their management and realisation.

Line management and other organisation

Assisted by the Executive Management Group, the President & CEO is responsible for implementing and steering the company's governance, decision-making procedures, control and risk management, and for the assessment of strategic risks, major business risks and continuity threats at the company level, and their related risk management.

The heads of functions are responsible for the practical implementation of the governance, decision-making procedures, controls and risk management for their areas of responsibility, as well as for the reporting of deviations, and the sufficiency of detailed guidelines. The directors appointed to be in charge of threats to continuity management are responsible for drawing up and maintaining continuity management plans and guidelines, and for arranging sufficient training and practice.

The Chief Financial Officer is responsible for arranging procedures, controls and monitoring at the company level as required by the harmonised operating methods of internal control and risk management. The company's General Counsel is responsible at the company level for assuring the legality and regulation compliance of essential contracts and internal guidelines, taking into account the company's interests, as well as for the procedures these require. Each Fingrid employee is obligated to identify and report any risks or control deficiencies she or he observes and to carry out the agreed risk management procedures.

Financial audit

An authorised public accounting company selected by the Annual General Meeting acts as auditor for the company. The company's financial auditor inspects the accounting, financial statements and financial administration for each financial period and provides the AGM with reports required by accounting legislation or otherwise stipulated in legislation. The financial auditor reports on his or her work, observations and recommendations for the Board of Directors and may also carry out other verification-related tasks commissioned by the Board or management.

Internal audit

The Board of Directors decides on the operating model for the company's internal audit. The internal audit acts on the basis of plans processed by the Audit Committee and approved by the Board. Audit results are reported to the object of inspection, the President & CEO, the Audit Committee and the Board. Upon decision of the Board, an internal audit outsourced to an authorised public accounting company acts within the company. From an administrative perspective, the internal audit is subordinate to the President & CEO. The internal audit provides a systematic approach to the assessment and development of the efficacy of the company's risk management, monitoring, management and administrative processes, and ensures their sufficiency and functionality as an independent party. The internal audit has the authority to carry out reviews and to access all information that is essential to the audit. Fingrid's internal audit carries out risk-based auditing on the company's various processes.

1.4.2 Foremost risks

Since Fingrid plays a significant role in Finnish society, the impact of risks is assessed from both the company's and society's perspective. Strategic risks are considered to be events that may lead to a material deterioration in the company's ability to operate or in its corporate image or, in the worst-case scenario, events that may lead to the company's operations being called into question by society.

The most significant of the company's three identified strategic risks is a severe disturbance related to the functioning of the power system, leading to a regional or nationwide blackout. Extensive disturbances to the power system can be caused by a technical malfunction, an extreme weather event, human error, an accident or vandalism. A major disturbance can paralyse society's functions and cause major damage to Finnish business and industry.

Financial regulation directly impacts shareholder value, financing and credit ratings. A significant negative change in regulation constitutes a material strategic risk for the company's operations.

The third strategic risk for the company's operations is the possibility of a distortion in the corporate culture under the monopoly's protection, which can surface in the form of disregard for sustainability requirements or other unprofessional behaviour.

In addition to strategic risks, business risks identified as substantial, such as accident, asset, information security, procurement, regulatory interest rate and counterparty and refinancing risks, are reported to the company's Board of Directors.

Fingrid's risk management and foremost risks are explored in greater detail in the company's annual report and on its website. Fingrid's financing risks are described in more detail in sections 6.2 and 6.3 of the consolidated financial statements. No substantial risks were realised in 2020.

1.5 Board of Directors and corporate management

Fingrid Oyj's Annual General Meeting was held in Helsinki on 20 March 2020. The members of the Board of Directors in 2020 were Juhani Järvi (Chair), Päivi Nerg (Deputy Chair), Anu Hämäläinen (until 20 March 2020), Sanna Syri, Esko Torsti, and Hannu Linna as a new member (as of 20 March 2020).

PricewaterhouseCoopers Oy was elected as the auditor of the company, with Heikki Lassila, APA, serving as the responsible auditor.

The Board of Directors has two committees: the Audit Committee and the Remuneration Committee.

The Audit Committee consisted of Sanna Syri (Chair as of 20 March 2020), Anu Hämäläinen (Chair until 20 March 2020), Juhani Järvi and Päivi Nerg (as of 20 March 2020).

The Remuneration Committee consisted of Juhani Järvi (Chair), Päivi Nerg (until 20 March 2020), Hannu Linna (as of 20 March 2020) and Esko Torsti.

Jukka Ruusunen serves as President & CEO of the company. Fingrid has an Executive Management Group which supports the President & CEO in the company's management and decision-making.

Fingrid was well prepared for the exceptional circumstances during the coronavirus pandemic. The company's management and decision-making was not endangered, and the core operations were successfully continued in a nearly normal manner, despite the exceptional circumstances, by resorting heavily to remote work.

A corporate governance statement, required by the Finnish Corporate Governance Code, has been provided separately. The statement and other information required by the Code are also available on the company's website at www.fingrid.fi.

1.6 Share capital

The company's share capital is EUR 55,922,485.55. Fingrid shares are divided into Series A shares and Series B shares. The number of Series A shares is 2,078 and the number of Series B shares is 1,247. The voting and dividend rights related to the shares are described in more detail

in the notes to the financial statements and in the articles of association available on the company's website.

1.7 Other events during the financial year

Fingrid Oyj carried out, together with the other shareholders, a share trade transaction in which 66% of the shares in Nord Pool Holding AS were sold to Euronext Nordics Holding AS, a Norwegian company wholly owned by Euronext N.V. Fingrid's indirect ownership in Nord Pool is now 6.4%, which is managed through TSO Holding AS, a holding company jointly owned by the transmission system operators and of which Fingrid owns 18.8%. Fingrid Oyj's holding in TSO Holding AS is accounted for in the 'Other long-term investments' section in the balance sheet.

1.8 Legal proceedings and proceedings by authorities

An accident took place on a worksite in Laukaa, Finland, on 25 August 2017, where an employee of Revilla y Garcia S.L. died after having fallen from a transmission line tower. A civil court case, as well as proceedings concerning social-security-based damages, have been initiated in Spain for damages against Fingrid (the client linked with the accident), the main contractor, Technolines S.R.L. filial i Finland, and its subcontractor, Revilla y Garcia S.L. Fingrid does not believe the claim against it is likely to succeed and, in Fingrid's view, the legal proceedings or their outcome are not likely to have a substantial impact on the company's earnings or financial position.

On 30 June 2020, the Market Court received an appeal on the company's decision to exclude a bidder from a competitive tender for 400-MVA transformers to be acquired in 2022–2025. The company decided to discontinue the tendering process on 14 July 2020. After the decision to discontinue the tendering process, the appeal to the Market Court was withdrawn on 28 July 2020.

1.9 Events after the review period and estimate of future outlook

Fingrid Group's profit for the 2021 financial period, excluding changes in the fair value of derivatives and before taxes, is expected to improve somewhat compared to 2020.

Results forecasts for the financial year are complicated especially by the uncertainty related to grid service revenue, ITC income and cross-border transmission income, and to reserve and loss power costs. These are dependent on the variations in outside temperature, precipitation, windiness, and hydrological conditions in the Nordic countries, which affect electricity consumption and electricity prices in Finland and neighbouring areas and thus also grid transmission volumes. The company's debt service capacity is expected to remain stable.

1.10 Board of Directors' proposal for the distribution of profit

The guiding principle for Fingrid's dividend policy is to distribute substantially all of the parent company profit as dividends. When making the decision, however, the economic conditions, the company's near-term capital expenditure and development needs as well as any prevailing financial targets of the company are always taken into account.

Fingrid Oyj's parent company's profit for the financial year was EUR 136,014,363.58 and distributable funds in the financial statements total EUR 186,751,302.32. Since the close of the financial year, there have been no material changes in the company's financial position and, in the Board of Directors' view, the proposed dividend distribution does not compromise the company's solvency.

Since the closing date, the Board of Directors has proposed to the Annual General Meeting of shareholders that, on the basis of the balance sheet adopted for the financial period that ended on 31 December 2020, a dividend of EUR 53,500.00 at maximum per share be paid for Series A shares and EUR 19,600.00 at maximum for Series B shares, for a total of EUR 135,614,200.00 at maximum. The dividends shall be paid in two instalments. The first instalment of EUR 35,500.00 for each Series A share and EUR 13,000.00 for each Series B share, totalling EUR 89,980,000.00, shall be paid on 12 April 2021. The second instalment of EUR 18,000.00 at maximum per share for each Series A share and EUR 6,600.00 at maximum per share for each Series B share, totalling EUR 45,634,200.00 at maximum in dividends, shall be paid subject to the Board's decision after the half-year report has been confirmed, based on the authorisation given to the Board in the Annual General Meeting. The Board has the right to decide, based on the authorisation granted to it, on the payment of the second dividend instalment after the half-year report has been confirmed and it has assessed the company's solvency, financial position and financial development. The dividends that have been decided on with the authorisation given to the Board shall be paid on the third banking day after the decision. It will be proposed that the authorisation remain valid until the next Annual General Meeting.

1.11 Annual General Meeting 2021

Fingrid Oyj's Annual General Meeting is scheduled to be held on 7 April 2021 in Helsinki.

In Helsinki, on 5 March 2021

3 CONSOLIDATED FINANCIAL STATEMENTS (IFRS)

INTRODUCTION

How to read Fingrid's financial statements and get the most out of it?

- **Notes are compiled under specific themes to provide the best representation of Fingrid**
- **Chapters 4-7 consist of notes to the consolidated financial statements.**
- **Accounting principles are linked with the note most relevant for each specific principle.**
- **Accounting principles are shown at the end of each note, in a separate box and recognizable by the use of symbol**

- **Interesting facts about Fingrid's operating environment are highlighted in infoboxes throughout the notes to the financial statements. The infoboxes can be recognized by the use of symbol**

Fingrid's business model and the regulation of transmission system operations

Fingrid constitutes a natural monopoly as referred to in the Finnish Electricity Market Act (588/2013), with duties defined in legislation. The company's operations, reasonableness in pricing and financial result are regulated and overseen by the Energy Market Authority. The Energy Authority determines Fingrid's allowed financial result over four-year regulatory periods (2020–2023).

Transmission system operations, in other words the transmission of electricity in the nationwide grid owned by the company, constitutes the bulk of Fingrid's turnover, profit and balance sheet.

The allowed financial result from transmission network operations is calculated by multiplying the total adjusted capital invested in the transmission network operations (transmission network assets valued at the regulatory present value) with the reasonable rate of return defined by the Energy Market Authority.

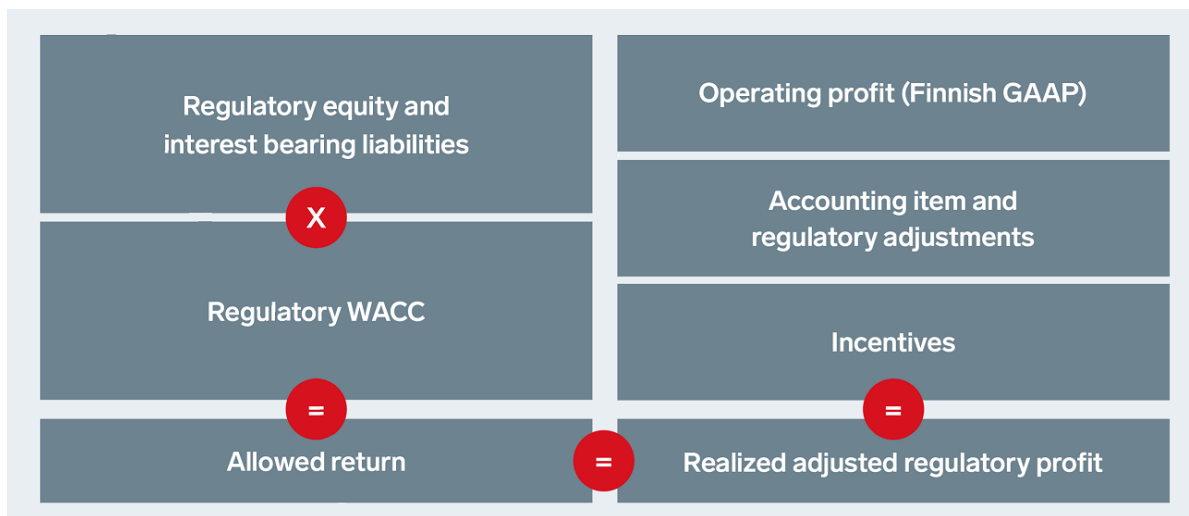

The reasonable financial result allowed by the regulation forms the basis of Fingrid's financial planning and pricing. One can calculate the required amount of turnover by adding operating expenses in the result. Fingrid's turnover mainly constitutes from the pricing of the transmitted electricity, in other words the consumption of Fingrid's customers. Fingrid additionally charges fees for output from and input into the grid, and power generation capacity fees. The company determines in advance for the next year the unit prices for the transmission of electricity to recover required turnover. The company's total costs consist of the operating expenses and financial costs and taxes, which are excluded from regulatory calculations.

The so-called adjusted profit, realised in compliance with the regulation, is calculated by adjusting the parent company's operating profit according to the Energy Market Authority's regulation methods and by adding the impact of the incentives.

The regulation incentives are as follows: *Investment incentive* – intended to promote reasonable and cost-effective investments as well as a justified overhaul of components. The incentive impact is created by the fact that the methods allow the TSO straight-line depreciations based on the replacement value of the transmission network assets. *Quality incentive* – intended to encourage the TSO to improve the quality of electricity transmission. In practical terms this means minimising the calculated negative impact caused by non-transmitted energy. *Efficiency improvement incentive* – intended to encourage the TSO to operate cost-effectively. The efficiency improvement incentive is based on Fingrid's controllable operating costs.

Innovation incentive – intended to encourage the TSO to develop and use innovative technical and operational solutions in its network operations. In practice, this means adequate R&D resources.

Any realised regulatory profit over a regulatory period that exceeds the allowed return is a surplus that must be returned to the customers in the form of lower future prices. If the realised regulatory profit over a regulatory period is below the allowed return, the result is a deficit which the company may recover from the customers in the form of higher future prices. No regulatory surplus or deficit income is recorded in the financial statements. Fingrid's aim is to achieve the allowed financial result in the regulatory period.

The Energy Authority determines Fingrid's highest allowed financial result over four-year regulatory periods. The Energy Authority has confirmed a cumulative deficit of EUR 28.4 million for the previous regulatory period, 2016–2019. The table below shows Fingrid's own rough approximation for the deficit in 2020. Fingrid's aim is to achieve the allowed return during the regulatory period 2020–2023.

WACC (pre-tax) 2020 (2019)	Adjusted capital 2020 (2019)	Allowed financial result 2020 (2019)	Deficit(-)/Surplus(+) 2020 (2019)	Cumulative Deficit (-)/Surplus(+) 2020-2023
4.89% (5.36%)	Approx. EUR 3,000 (2,900) million	Approx. EUR 145 (155) million	Approx. EUR -30 (-15) million	EUR -30 million

The company also engages in other regulated business operations, but the impact of these on the company's financial result and balance sheet is negligible.

4 BENCHMARK FOR TSO OPERATIONS (IFRS)

- **This chapter contains first general information about the Group and the general accounting principles applied to the consolidated financial statements.**
- **The chapter focuses on describing how Fingrid's turnover and result are formed and how they relate to the regulatory revenue level. The impact of the regulation is reflected in Fingrid's day-to-day operations and revenue collection.**
- **The chapter also describes Fingrid's operating receivables and liabilities, as well as the risk management they entail.**
- **People are Fingrid's most important resource, which is why information related to personnel has been included here, in the first note.**
- **Fingrid is a substantial tax payer, and Fingrid does not use tax planning. The note on taxes is at the end of this chapter, in chapter 4.9.**

4.1 General information about the Group and general accounting principles

Fingrid Oyj is a Finnish public limited liability company responsible for electricity transmission in the high-voltage transmission system in Finland (the main grid). Fingrid's nationwide grid is an integral part of the power system in Finland. The transmission grid is the high-voltage trunk network which covers all of Finland. Major power plants, industrial plants and electricity distribution networks are connected to the grid.

Finland's main grid is part of the Nordic power system, which is connected to the system in Central Europe via high-voltage direct current transmission links. Finland also has DC links with Russia and Estonia.

The main grid encompasses more than 14,000 kilometres of 400, 220 and 110 kilovolt transmission lines, plus more than 100 substations.

Fingrid is in charge of planning and monitoring the operation of the main grid and for maintaining and developing the system. An additional task is to participate in work carried out by ENTSO-E, the European Network of Transmission System Operators for Electricity, and in preparing European market and operational codes as well as network planning.

Fingrid offers grid, cross-border transmission and balance services to its contract customers: electricity producers, network operators and the industry. Fingrid serves the electricity market by maintaining adequate electricity transmission capacity, by removing bottlenecks from cross-border transmission links and by providing market data.

The consolidated financial statements include the parent company Fingrid Oyj and its wholly owned subsidiaries Finextra Oy and Datahub Oy. The consolidated associated company is eSett Oy (ownership 25.0%). The Group has no joint ventures.

Fingrid issues bonds under the Euro Medium Term Note (EMTN) programme. Fingrid Oyj's issuances under the EMTN programme are generally listed on the London and Irish stock exchanges. Fingrid shares are not listed.

Critical accounting estimates and judgements

When the consolidated financial statements are drawn up in accordance with the IFRS, the company management needs to make estimates and assumptions which have an impact on the amounts of assets, liabilities, income and expenses recorded and conditional items presented. These estimates and assumptions are based on historical experience and other justified assumptions which are believed to be reasonable under the conditions which constitute the foundation for the estimates of the items recognised in the financial statements. The actual amounts may differ from these estimates. In the financial statements, estimates have been used for example, when specifying the economic lives of tangible and intangible asset items, and in conjunction with deferred taxes and provisions. Critical estimates and judgements by management are described by topic in the notes, and the judgement or estimates related to which are in accordance with the following table.

Estimate of the purchase and sale of imbalance power	Chapter 4.3
Inter-Transmission System Operator Compensation (ITC)	Chapter 4.3
Deferred tax assets and liabilities	Chapter 4.9
Determination of the fair value measurement of grid assets	Chapter 5.1
Determination of the depreciation periods of property, plant and equipment, and intangible assets	Chapter 5.2

Accounting principles

The preparation of the consolidated financial statements followed the same standards as in 2019.

Segment reporting

The entire business of the Fingrid Group is deemed to comprise grid operations in Finland with system responsibility, only constituting a single segment. There are no essential differences in the risks and profitability of individual products and services. For that reason, segment reporting in accordance with the IFRS 8 standard is not presented. The operating segment is reported in a manner consistent with the internal reporting to the chief operating decision-maker. The chief operating decision-maker is the company's Board of Directors. Fingrid operates only in Finland, which is also why geographical data is not presented.

Foreign currency transactions

The consolidated financial statements are presented in euros, which is the functional currency of the parent company. Transactions and financial items denominated in foreign currencies are recognised at the foreign exchange mid-rate quoted by the European Central Bank (ECB) at the transaction date. Receivables and liabilities denominated in foreign currencies are valued in the financial statements at the mid-rate quoted by the ECB at the closing date. Foreign exchange gains and losses from business are included in the corresponding items above operating profit. Foreign exchange gains and losses from financial instruments are recognised at net amounts in finance income and costs.

Earnings per share

The Group has calculated undiluted earnings per share in accordance with standard IAS 33. Undiluted earnings per share are calculated using the weighted average number of shares outstanding during the financial year. Since Fingrid has no share option schemes or benefits bound to shareholders' equity or other equity financial instruments, there is no dilutive effect.

4.2 The company's general risk management processes and policies

In the risk management process, the risk factors linked with operative activities, assets and financing are estimated systematically according to unified criteria. The risks are divided into strategic risks and major business risks to be reported to the Board of Directors, and into operational risks. Hedging a risk will be implemented when the cost of the hedge is in reasonable relation to the size of the risk. A general objective is to transfer significant risks by contracts, insurances or derivatives. The risks deemed to be moderate in terms of their impacts are managed by Fingrid independently, through clear controls and other practical measures.

Risk management is planned holistically with the objective of comprehensively identifying, assessing, monitoring and safeguarding the company's operations, the environment, personnel and assets from various threats and risks. Due to the nature of the company's basic mission, risks are also assessed from a societal perspective.

The Board approves the key principles of internal control and risk management and any amendments to them. The Board of Directors approves the primary actions for risk management as part of the corporate strategy, indicators, action plan, and budget. The Board of Directors (Audit Committee) receives a situation report on the major risks relating to the operations of the company and on the management of such risks.

FINGRID OYJ
www.fingrid.fi

5 March 2021

4.3 Formation of turnover and financial result

Turnover consists of the following:

1. TURNOVER, €1,000	2020	2019
Grid service revenue	373,569	385,031
Sales of imbalance power	260,823	346,749
Cross-border transmission income	6,918	11,608
ITC income	17,147	14,429
Peak load capacity	12,923	14,111
Other operating income	11,075	17,427
Total	682,456	789,356

Grid service income mainly consists of the unit price for electricity transmission multiplied by the volume. The Energy Market Authority approves the pricing structure for grid services, on the basis of which Fingrid sets the unit prices for electricity transmission during the winter period and for consumption during other times. The winter period begins on 1 December and ends on the last day of February. Fingrid additionally charges fees for output from and input into the grid, and power generation capacity fees. Fingrid seeks to set the unit prices for electricity transmission each autumn for the next year, for one year at a time. Within the framework of grid services, a customer obtains the right to transmit electricity to and from the main grid through its connection point. Grid service is agreed by means of a grid service contract signed between a customer connected to the main grid and Fingrid.

Each electricity market party must ensure its electricity balance by making an agreement with either Fingrid or some other party. Fingrid buys and sells imbalance power in order to stabilise the hourly power balance of an electricity market party (balance responsible party). Imbalance power trade and pricing are based on a balance service agreement with equal and public terms and conditions.

Fingrid is responsible for the continuous power balance in Finland at all times by buying and selling balancing power in Finland. The balance responsible parties can participate in the Nordic balancing power market by submitting bids on their available capacity. The terms and conditions of participation in the balancing power market and the pricing of balancing power are based on the balance service agreement.

Transmission services on the cross-border connections to the other Nordic countries enable participation in the European day-ahead and intraday markets. Fingrid offers electricity transmission service from Russia through its 400 kV cross-border connections. The transmission service is intended for fixed electricity imports and it is based on Fingrid's agreements with the Russian TSO and system operator. The technical terms of the cross-border power lines are defined in the Intersystem Agreement, the operational terms in the Operation Agreement, measurement terms in the Agreement of Electricity Metering and Accounting and the commercial terms are specified in the Agreement of Capacity Allocation. The Customer and Fingrid agree on the terms of the electricity transmission in a transmission service agreement, which is based on the agreements mentioned above. The contractual terms are equal and public. ITC compensation is, for Fingrid, income and/or costs which the transmission system operator receives for the use of its grid by other European transmission system operators and/or pays to other transmission system operators when using their grid to serve its own customers.

The peak load capacity secures the supply security of electricity in situations of the Finnish power system where the planned electricity procurement is not sufficient to cover the anticipated electricity consumption. The peak load capacity system is a special task assigned to Fingrid by the Finnish Energy Authority, based on the Peak Load Capacity Act (117/2011, Act on peak load capacity which secures a balance between electricity production and consumption). The Energy Authority submits the peak load capacity plants for competitive tendering, and Fingrid manages the peak load capacity service as required by the Act. The peak load capacity can consist of both power plants and facilities capable of adjusting their electricity consumption.

2. OTHER OPERATING INCOME, €1,000	2020	2019
Rental income	528	650
Capital gains on fixed assets	577	2,713
Contributions received	547	290
Other income	738	568
Total	2,390	4,221

Turnover and profit from operations 2016-2020, MEUR

Accounting principles

Revenue recognition

Sales recognition takes place on the basis of the delivery of the service. Electricity transmission is recognised once the transmission has taken place, and balance power services are recognised on the basis of the delivery of the service. Indirect taxes and discounts, etc., are deducted from the sales income when calculating turnover.

IFRS 15 Revenue from Contracts with Customers

The fundamental principle of the IFRS 15 standard is that sales revenue should be recognised when control over the goods or the service is transferred to the customer.

A five-step process should be applied when recognising sales revenue:

- Identify the customer contract(s)

- Identify the individual performance obligations
- Determine the transaction price according to the contract
- Allocate the transaction price to individual performance obligations, and
- Recognise revenue when each performance obligation is met.

Sales recognition takes place on the basis of the supply of the service. Electricity transmission is recognised once the transmission has taken place. Balance power services are recognised on the basis of the delivery of the service. Fingrid has defined the performance obligations related to each agreement, and revenue recognition has been examined separately for each performance obligation. When determining the extent to which a performance obligation is met, a single method should be applied for all performance obligations to be met over time. Connection agreements are long term and can be terminated, at the earliest, 15 years from the date when they entered into force. If a customer does not receive an individual item of goods or a service against the connection fee, this must be recognised as revenue in the same way as the other revenue according to the contract, generally over the contract term.

Judgements and estimates

Estimate of the purchase and sale of imbalance power

The income and expenses of imbalance power are ascertained through a nationwide imbalance settlement procedure, which is based on the Ministry of Employment and Economy's 9 December 2008 decree on the disclosure obligation related to the settlement of electricity delivery. The final imbalance settlement is completed no later than 13 days from the delivery month, which is why the income and expenses of imbalance power in the financial statements are partly based on preliminary imbalance settlement. The estimate is based on the preliminary imbalance settlement information provided by the imbalance settlement. For foreign balances, the calculations have been verified with the foreign counterparties.

Inter-Transmission System Operator Compensation (ITC)

Compensation for the transit transmissions of electricity has been agreed upon through an ITC (Inter-Transmission System Operator Compensation) agreement. The centralised calculations are carried out by ENTSO-E (the European Network of Transmission System Operators of Electricity). ITC compensation is determined on the basis of the compensation paid for use of the grid and transmission losses. The ITC calculations take into account the electricity transmissions between the various ITC agreement countries. ITC compensation can represent both an income and a cost for a transmission system operator. Fingrid's share of the ITC compensation is determined on the basis of the cross-border electricity transmissions and imputed grid losses. ITC compensation is invoiced retroactively after all parties to the ITC agreement have approved the invoiced sums. Control is carried out monthly. This is why the uninvoiced ITC compensations for 2020 have been estimated in the financial statements. The estimate has been made using actual energy border transmissions in Finland and unit compensations, which have been estimated by analysing the actual figures from previous months and data on grid transmissions during these months.

4.4 Revenue-related receivables and credit risk management

3. TRADE RECEIVABLES AND OTHER RECEIVABLES, €1,000	2020	2019
Trade receivables	80,940	74,355
Receivables from associated companies	5,720	3,881
Prepayments and accrued income	19,060	6,887
Other receivables	4,083	9,736
Total	109,803	94,858

Essential items included in prepayments and accrued income	2020	2019
Accruals of sales	14,086	3,145
Accruals of purchases/prepayments	1,370	1,115
Interest receivables	3,573	2,609
Tax assets	29	17
Amortized personnel costs	1	
Total	19,060	6,887

Credit risk management – customers

According to The Electricity Market Act, the company is obliged to accept distribution network operators joining the grid as well as electricity producers and consumers as its customers. Accordingly, the company cannot choose its customers based on a credit risk analysis or collect different fees from them. In general, collateral are not required from the company's customers to secure sales payments, but in the event of an overdue payment, this is possible. The unit in charge of the customer

FINGRID OYJ
www.fingrid.fi

5 March 2021

relationships is responsible for verifying their creditworthiness. The procedure following a customer payment default is defined in the terms and conditions of the Main Grid Contract. At the turn of the year, the company had minor outstanding receivables, of which the credit risk was considered to be low, and the company estimates it will receive these payments. The company has no impairments related to receivables.

Netting of sales receivables and trade accounts payables

The sales receivables and trade accounts payables are netted in the balance sheet as presented in the table below. The netted items are associated with purchases and sales of imbalance power. The company has a legally enforceable right of set-off to these items in any circumstance and will use this right.

4. NETTING OF TRADE RECEIVABLES AND TRADE PAYABLES € 1,000						
	2020			2019		
	Gross amount of trade receivables/trade payables	Amount of netted items	Net amount of trade receivables and trade payables presented in the balance sheet	Gross amount of trade receivables/trade payables	Amount of netted items	Net amount of trade receivables and trade payables presented in the balance sheet
Trade receivables	101,169	-20,229	80,940	90,365	-16,010	74,355
Trade payables	56,293	-20,229	36,064	40,518	-16,010	24,508

Accounting principles

Trade and other receivables

Loans and other receivables are recognised initially at fair value; subsequently they are measured at amortised cost using the effective interest rate method. The expected credit losses are assessed based on historical amounts of credit losses, taking into account forward-looking information on economical developments and receivable-specific assessments. Impairment losses are recognised directly, under other operating expenses, to reduce the carrying amount of the receivables. Fingrid did not have any impairment losses during the periods presented here.

In addition to trade receivables and other receivables, the company has a small amount of loan receivables from associated companies. These are long- and short-term and described in Chapter 7.1. The receivables from associated companies are recognised according to these same accounting principles.

FINGRID OYJ
www.fingrid.fi

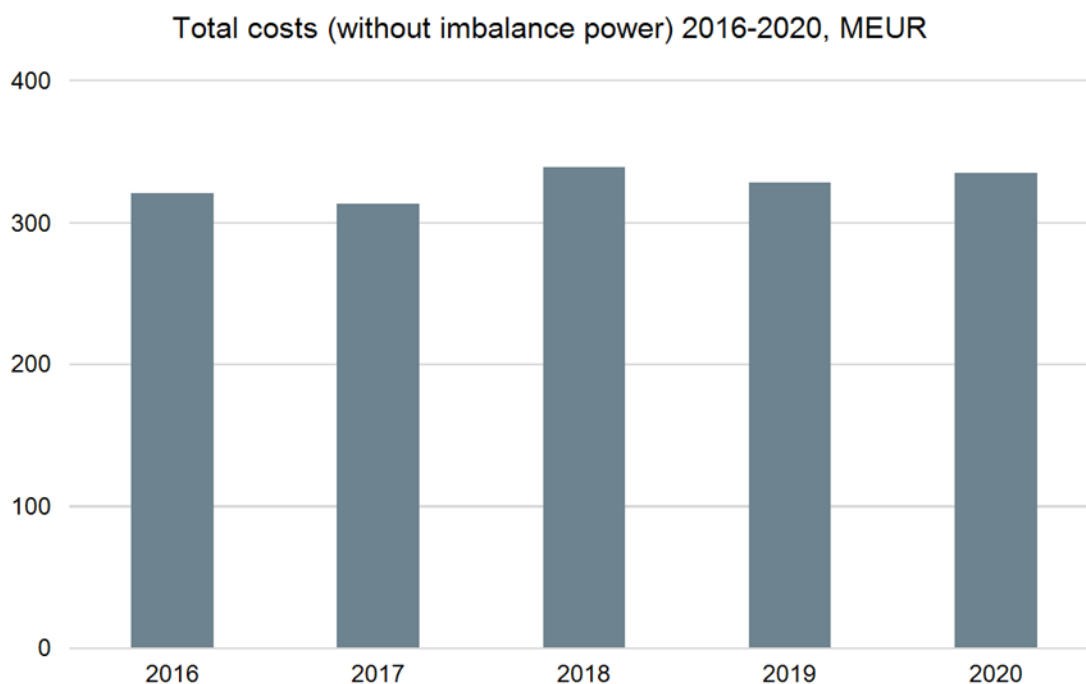

5 March 2021

4.5 Operating expenses, liabilities and credit risk management for purchases

Fingrid's operating expenses consist of and have developed as follows:

Cost increases due in particular to new tasks and unexpected external changes affecting operations has been a special characteristic of grid operations in recent years. The new tasks include, among other things, the changes required by the European network codes and the costs for developing these tasks, and developing the Nordic imbalance settlement and the related markets. Some of the new tasks and responsibilities are assigned to Fingrid by law, which means the company must increasingly develop and back up its operations. The cost factors also include society's increasing dependency on the power system, as well as needs related to data security. Fingrid nevertheless continues to be one of the most cost-effective TSOs in the world in international benchmark studies. The Group's R&D costs in 2020 amounted to EUR 4.5 (3.4) million.

Auditors' fees are included in other operating expenses

The company's operating model is largely based on outsourcing, including areas such as grid investments, maintenance management and ICT purchases. The company will apply competitive tendering as described in the procurement policy. All purchasing activities are based on impartiality, equality and transparency. Procurement decisions will be made according to previously published financial and qualitative criteria that are verifiable also after the fact. Fingrid aims to ensure that all suppliers and their subcontractors operate in a sustainable manner. A commitment to Fingrid's Supplier Code of Conduct is required from all suppliers.

7. TRADE PAYABLES AND OTHER LIABILITIES, €1,000	2020	2019
Trade payables	36,064	24,508

Total	307,486	159,240

Credit risk in purchasing

The heads of functions are in charge of counterparty risks related to suppliers. The procurement policy and guidelines, and separate instructions set out the financial criteria required for Fingrid's suppliers and their monitoring.

General procurement principles

The Group follows three alternative procurement methods when purchasing goods or services. When the value of the purchase is less than 60,000 euros and the benefits of a competitive tender are smaller than the costs of the purchase, the purchase can be executed without a competitive tender or it can be executed through an oral request. A written order or purchasing agreement is always drawn up. When the estimated value of the procurement exceeds 60,000 euros but is below the threshold values applied to public procurements, the procurement is subject to competitive bidding by requesting written bids from the supplier candidates. When the public procurement threshold values that apply to Fingrid (in 2020: EUR 428,000 for goods and services, EUR 5,350,000 for construction projects, EUR 428,000 for design competitions and EUR 5,350,000 for right-of-use agreements) are exceeded, the company follows the public procurement legislation applied to special sectors.

4.6 Inventories

Fingrid prepares for outages by owning and maintaining reserve power plants. The inventories contain fuel for reserve power plants, spare parts for submarine cables, back-up equipment and parts for substations, and repair equipment for transmission lines. The aim of stockpiling is to achieve sufficient preparedness at the substations and on the transmission lines owned by Fingrid in case of faults and events possibly occurring during times of crisis.

8. INVENTORIES, €1,000	2020	2019
Materials and consumables		
Material stocks	8,636	7,063
Fuel stocks	5,047	5,004
Total	13,684	12,067

The use of inventories was entered as an expense of EUR 3.0 (1.6) million.

Accounting principles

Inventories

Inventories are measured at the lower of acquisition cost or net realisable value. The acquisition cost is determined using the FIFO principle. The net realisable value is the estimated market price in normal business reduced by the estimated future costs of completing and estimated costs required by sale. Inventories consist of material and fuel inventories.

4.7 Management of commodity risks

The company is exposed to electricity price and volume risk through transmission losses so that the company must acquire so-called loss power in an amount corresponding to the electricity transmission losses. However, the electricity price and volume risks are not significant to the company's turnover and financial result over time. If the volume of transmitted electricity deviates from the forecasted volume, the result may be a deviation in the company's turnover and financial result. This can lead to a surplus or deficit compared with the allowed reasonable return for the year in question, which the company will aim to offset during the regulatory period.

Loss power purchases and the price hedging thereof are based on the Corporate Finance Principles approved by the Board of Directors. Moreover, the company has a loss power policy, approved by the Executive Management Group, for loss power hedging and purchases, as well as operative instructions, instructions for price hedging and control room instructions. The allowed hedging instruments are defined in the loss power policy. The purpose of price hedging is to reduce the impact of market price volatility and enable sufficient predictability in order to keep the annual pressures on grid pricing of loss energy at a moderate level. The hedging service is procured from an external portfolio manager who decides on the implementation and timing of the hedges according to the specifications of the loss power policy and the given instructions. The purchase price of loss power is hedged using derivatives such that the price hedging of electricity is started three years before the year of delivery, i.e. the hedge horizon is four years at maximum. The goal is that the portfolio manager times the execution of her/his hedging plan, which is based on the loss power forecast, so that the delivery year is fully hedged by the end of September of the preceding year. OTC futures are used for price hedging, the pricing of which is based on NASDAQ OMX Commodities' quotes. The nominal values, fair values and exposures of electricity derivatives are disclosed in table 23.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Commodity risks other than those related to loss energy purchases arise if the company enters into purchasing agreements in which the price of the underlying commodity influences the final price of the investment commodity (commodity price risk). As a rule, commodity price risks and exchange rate risks are fully hedged. A risk that amounts to less than EUR 5 million when realised can be left unhedged for reasons of cost-effectiveness.

4.8 Personnel - the cornerstone of our operations

Fingrid Oyj employed 408 (380) persons, including temporary employees, at the end of the year. The number of permanent personnel was 363 (338). Of the personnel employed by the company, 23 (24) per cent were women and 77 (76) per cent were men. The average age of the personnel was 44 (44).

9. PERSONNEL EXPENSES, €1,000	2020	2019
Salaries and bonuses	26,669	22,308
Pension expenses - contribution-based schemes	3,635	3,454
Other additional personnel expenses	902	648
Total	31,207	26,409
Salaries and bonuses of top management	2,023	2,224

Personnel costs amounted to EUR 34.1 (31.1) million, of which EUR 2.9 (4.7) million was capitalised to investment projects.

In 2020, the Group applied a remuneration system for senior management; the general principles of the system were accepted by the Board of Directors of Fingrid Oyj on 18 December 2019. The total remuneration of the President & CEO and the members of the Executive Management Group consists of a fixed total salary, a one-year bonus scheme, and a three-year long-term incentive scheme. The maximum amount of the one-year bonus scheme payable to the CEO was 40 per cent of the annual salary and to the other members of the executive management group 25 per cent of the annual salary. The maximum amount of the annual long-term incentive scheme payable to the CEO was 40 per cent and to the other members of the executive management group 25 per cent.

The Group currently has contribution-based pension schemes only. The pension security of the Group's personnel is arranged by an external pension insurance company. Pension premiums paid for contribution-based schemes are recognised as an expense in the income statement in the year to which they relate. In contribution-based schemes, the Group has no legal or factual obligation to pay additional premiums if the party receiving the premiums is unable to pay the pension benefits.

NUMBER OF SALARIED EMPLOYEES IN THE COMPANY DURING THE FINANCIAL YEAR:	2020	2019
Personnel, average	400	384
Personnel, 31 Dec	408	380

Accounting principles

Employee benefits

Pension obligations

The company has only defined contribution-based pension schemes. A defined contribution-based pension arrangement refers to a pension scheme according to which fixed contributions are paid into a separate entity, and the Group bears no legal or actual obligation to make additional contributions if the fund does not contain sufficient funds to pay out benefits based on work performed during current and previous financial periods to all employees. Under defined contribution-based pension schemes, the Group pays mandatory, contractual or voluntary contributions into publicly or privately managed pension insurance policies. The Group has no other contribution obligations in addition to those payments. The payments are entered as personnel costs when they fall due. Advance payments are entered in the balance sheet as assets insofar as they are recoverable as refunds or deductions from future payments.

4.9 Taxes

The company will pay its income taxes in accordance with the underlying tax rate, without special tax arrangements. Income taxes consist of direct taxes and the change in deferred tax: EUR -29.8 (-34.5) million and EUR 10.4 (13.8) million respectively. Fingrid's effective tax rate is essentially comparable to Finland's corporate tax rate of 20%. In 2020, the differences between the Finnish corporate tax rate and Fingrid's effective tax rate, EUR -8.3 (-0.1) million in total, were caused by a small quantity of

FINGRID OYJ
www.fingrid.fi

5 March 2021

non-deductible items, a tax-free dividend income from the sale of Nord Pool shares, and the deferred tax assets recognised from Fingrid Datahub's cumulative losses. In 2020, the differences between the Finnish corporate tax rate and Fingrid's effective tax rate, EUR -8,3 (-0,1) million in total, were caused by a small quantity of non-deductible items, a tax-free dividend income from the sale of Nord Pool shares, and the deferred tax assets recognised from Fingrid Datahub's cumulative losses. The table below describes the development of Fingrid's effective tax rate.

Accounting principles

Income taxes

Taxes presented in the consolidated income statement include the Group companies' accrual taxes for the profit of the financial year, tax adjustments from previous financial years and changes in deferred taxes. Deferred taxes are recorded in accordance with Finland's statutory corporate tax rate of 20%. Taxes are recognised in the income statement unless they are linked with other comprehensive income, in which case the tax is also recognised in other comprehensive income. Such items in the Group consist solely of available-for-sale investments.

Deferred tax assets and liabilities are recognised on all temporary differences between the tax values of asset and liability items and their carrying amounts using the liability method. Deferred tax is recognised using tax rates valid up until the closing date. The deferred tax liabilities arising from the original recognition of goodwill will not be recognised, however. Deferred tax liabilities will also not be recognised if they are caused by the original recognition of the asset or liability and the item is not related to a merger and the transaction will not affect the accounting totals or the taxable revenue during its implementation. The deferred tax assets are shown as non-current receivables and deferred tax liabilities correspondingly as non-current liabilities.

The largest temporary differences result from the depreciation of property, plant and equipment, from financial instruments, and from the use of congestion income for capital expenditures. No deferred tax is recognised on the undistributed profits of the foreign associated company, because receiving the dividend does not cause a tax impact by virtue of a Nordic tax agreement. The deferred tax asset from temporary differences is recognised up to an amount which can likely be utilised against future taxable income.

5 LONG-TERM INVESTOR (IFRS)

- **This chapter focusses on Fingrid's assets, and above the most important ones: Grid assets and the indicators related to them.**
- **The chapter also takes a look at the company's goodwill and provides a description of other property, plant and equipment, and intangible assets.**

5.1 Grid assets

Fingrid's grid investment programme promotes the national climate and energy strategy, improves system security, increases transmission capacity and promotes the electricity markets. The annual capital expenditure in the grid has remained extensive.

The company's total capital expenditure in 2020 amounted to EUR 169.7 (126.9) million. This included a total of EUR 137.3 (103.4) million invested in the transmission grid and EUR 9.6 (5.5) million for reserve power. ICT investments amounted to EUR 21.1 (17.0) million. A total of EUR 4.5 (3.4) million was used for R&D projects during the year under review. Roughly ten kilometres of new transmission lines were completed and 570 kilometres were under construction. Fingrid's ongoing major electricity transmission projects included the construction of a transmission line from Oulu to Petäjävesi, the so-called 'Forest Line'. The construction of a third AC connection to Sweden is under preparation to boost the functioning of international electricity markets.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Grid assets are recognised at fair value for the purposes of the company's regulatory balance sheet, as described earlier. The regulatory fair value of the transmission network assets (adjusted replacement cost) is calculated by adding up the adjusted replacement costs for each grid component; these are calculated by multiplying the unit price specified by the Energy Authority with the number of grid components. The adjusted present value in use for a grid component is calculated based on the adjusted replacement cost, using the useful life and mean lifetime data of the grid component.

Congestion income

Congestion income is generated because of an insufficient transmission capacity between the bidding zones of an electricity exchange. In such cases, the bidding zones become separate price areas, and the transmission link joining them generates congestion income in the electricity exchange as follows: congestion income [€/h] = transmission volume in the day-ahead

markets [MW] * area price difference [€/MWh]. The basis for this is that a seller operating in a lower priced area receives less for their power than what a buyer pays for it in a higher priced area. The additional income caused by this price difference, i.e. congestion income, remains in the electricity exchange, which then pays the income to the TSOs as per the contractual terms. The congestion income received by a grid owner must be used for the purposes stated in EU Regulation 2019/943, Article 19: guaranteeing the actual availability of the allocated capacity, and maintaining or increasing interconnection capacities through network investments. As a consequence of the change in the regulation governing Fingrid's grid pricing, the company will include the congestion income received after 1 January 2016 in the balance sheet.

Fingrid's congestion income from cross-border transmission lines totalled EUR 146.7 (73.0) million. EUR 219.1 million in congestion income was left unused and will be used for future investments to improve the functioning of the electricity market.

Accounting principles

Congestion income

As a consequence of the change in the regulation governing Fingrid's grid pricing, the company will include the congestion income received after 1 January 2016 as accruals in the item other liabilities in the balance sheet. Of the accruals, congestion income will be recognised in the income statement as other operating income when their corresponding costs, as defined in the regulation, accrue as annual expenses in the income statement. Alternatively, they are entered in the balance sheet against investments, as defined by regulation, to lower the acquisition cost of property, plant and equipment, which lowers the depreciation of the property, plant and equipment in question. The congestion income received before 1 January 2016 was recognised in turnover.

Public contributions

Public contributions received from the EU or other parties related to property, plant and equipment are deducted from the acquisition cost of the item, and the contributions consequently reduce the depreciation made on the item. Other contributions are distributed as income over those periods when costs linked with the contributions arise. Other contributions received are presented in other operating income.

Decreases 1 Jan - 31 Dec	-251	
Cost at 31 Dec	85,594	70,016
Accumulated depreciation 1 Jan	-46,547	-42,588
Depreciation 1 Jan - 31 Dec	-3,093	-3,960
Carrying amount 31 Dec	35,954	23,469
Carrying amount 31 Dec	136,661	123,770

Land use rights are not depreciated but tested annually for impairment in connection with the testing of goodwill.

The entire business of the Fingrid Group is grid operations in Finland with system responsibility, which the full goodwill of the Group in the balance sheet is fully allocated to. The goodwill included in the balance sheet amounts to EUR 87.9 million and has not changed during the periods under review. Since, per the regulation, the fair value of the net assets included in the company's grid assets is approximately EUR 2,800.0 million compared to the carrying amount of EUR 1,927.4 million in net assets, which includes land use rights and goodwill, the book value of the asset items has not decreased.

Accounting principles

Property, plant and equipment

Grid assets form most of the property, plant and equipment. Grid assets include, among other things, 400 kV, 220 kV, 110 kV transmission lines, direct current lines, transmission line right-of-ways, substations and the areas they encompass (buildings, structures, machinery and equipment, substation access roads), gas turbine power plants, fuel tanks, generators and turbines.

Property, plant and equipment are valued in the balance sheet at the original acquisition cost less accumulated depreciation and potential impairment. If an asset is made up of several parts with useful lives of different lengths, the parts are treated as separate items and are depreciated over their separate useful lives.

When a part of property, plant and equipment that is treated as a separate item is replaced, the costs relating to the new part are capitalised. Other subsequent costs are capitalised only if it is likely that the future economic benefit relating to the asset benefits the Group and the acquisition cost of the asset can be determined reliably. Repair and maintenance costs are recognised in the income statement when they are incurred.

Borrowing costs, such as interest costs and arrangement fees, directly linked with the acquisition, construction or manufacture of a qualifying asset form part of the acquisition cost of the asset item in question. A qualifying asset is one that necessarily requires a considerably long time to be made ready for its intended purpose. Other borrowing costs are recognised as an expense. Borrowing costs included in the acquisition cost are calculated on the basis of the average borrowing cost of the Group.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Property, plant and equipment is depreciated over the useful life of the item using the straight-line method. Depreciation on property, plant and equipment taken into use during the financial year is calculated on an item-by-item basis from the month of introduction. Land and water areas are not depreciated. The expected economic lives are verified at each closing date, and if they differ significantly from the earlier estimates, the depreciation periods are amended accordingly.

The depreciation periods of property, plant and equipment are as follows:

Buildings and structure	
Substation buildings and separate buildings	40 years
Substation structures	30 years
Buildings and structures at gas turbine power plants	20-40 years
Separate structures	15 years
Transmission lines	
Transmission lines 400 kV	40 years
Direct current lines	40 years
Transmission lines 110-220 kV	30 years
Creosote-impregnated towers and related disposal costs	30 years
Aluminium towers of transmission lines (400 kV)	10 years
Optical ground wires	10-20 years
Machinery and equipment	
Substation machinery	10-30 years
Gas turbine power plants	20 years
Other machinery and equipment	3-5 years

Gains or losses from the sale or disposition of property, plant and equipment are recognised in the income statement under either other operating income or expenses. Property, plant and equipment are derecognised in the balance sheet when their economic useful life has expired, the asset has been sold, scrapped or otherwise disposed of to an outsider.

Goodwill and other intangible assets

Goodwill created as a result of the acquisition of enterprises and businesses is composed of the difference between the acquisition cost and the net identifiable assets of the acquired business valued at fair value. Goodwill is allocated to cash-generating units and is tested annually for impairment. With associated companies, goodwill is included in the value of the investment in the associated company.

Other intangible assets consist of computer software and land use and emission rights. Computer software is valued at its original acquisition cost and depreciated on a straight line basis during its estimated useful life. Land use rights, which have an indefinite useful life, are not depreciated but are tested annually for impairment.

More on emission rights in chapter 7.2.

Subsequent expenses relating to intangible assets are only capitalised if their economic benefits to the company increase beyond the former performance level. In other cases, expenses are recognised in the income statement when they are incurred.

FINGRID OYJ
www.fingrid.fi

5 March 2021

5.3 Lease agreements

The Group's leases mainly relate to office premises. The durations of the leases vary, and they may include options for extension and termination.

A right-of-use asset and a corresponding liability are recognised for leases at the date at which the leased asset is available for use by the Group. Each lease payment is allocated between the liability and finance cost.

13. LEASES, 1 000 €	2020	2019
Right-of-use-assets:		
Right-of-use-assets, buildings and structures		
Cost at 1 Jan	32,574	34,974
Increases 1 Jan - 31 Dec	783.62	220
Deprecation 1 Jan - 31 Dec	-2,685	-2,620
Cost at 31 Dec	30,673	32,574
Carrying amount 31 Dec	30,673	32,574
Lease liabilities:		
Non-current	28,913	30,515
Current	2,328	2,371
Total	31,241	32,886
Amounts recognised in the income statement		
Depreciation of right-of-use assets – buildings	2,685	2,620
Interest costs	653	683
Costs related to low value asset leases	806	964

The outgoing cash flow from leases in 2020 totalled EUR 3.1 million.

Accounting principles

Lease agreements

Fingrid Oyj mainly acts as a lessee, and most of the leases are for office premises. The lessee recognises all the leases as right-of-use assets and lease liabilities in the balance sheet, except for items of short duration (lease terms of less than 12 months) and of insignificant value. A right-of-use asset and a corresponding liability are recognised in the balance sheet at the date at which the leased asset is available for use by the Group. The right-of-use asset is depreciated as straight-line depreciations, over the shorter of lease term and useful life of the underlying asset. The interest cost of lease liabilities is recorded in finance costs. Lease liability payments are stated in the cash flow of financing activities and the related interest in interest expenses.

The lease term corresponds to the non-cancellable period of the lease and leases where, according to management's assessment, the options to extend the lease will be exercised with a high probability. The real-estate leases do not clearly define the interest rate implicit in the lease, which is why Fingrid uses as the interest rate an estimate of the company's incremental borrowing rate for real estate leases. The incremental borrowing rate is determined for the entire real-estate lease portfolio, whereby all real-estate leases are discounted using the same interest rate. The discount rates applied in discounting leases under IFRS 16 are based on the market yield on the company's publicly quoted bonds.

Short-term leases or leases of low-value assets, which are expensed in equal instalments, consist of vehicle lease payments, lease payments for land and water areas and lease payments for small machinery and equipment.

6 STRONG FINANCIAL POSITION (IFRS)

- **This chapter focuses on describing how Fingrid's financing is formed and how the related risks are managed, and at the same time, how short-term financial assets that secure liquidity are formed.**
- **The chapter describes the company's principles of capital management, ownership structure and dividend distribution policy.**
- **The end of the chapter contains a summary of all the financial assets and financing liabilities, as well as derivatives, that the company uses solely for risk management purposes. The risks relate to various market risks: the electricity price risk and the interest rate and exchange rate risk. Management of the price and volume risk of electricity is described in chapter 4.7.**

6.1 Capital management

Equity and liabilities as shown in the balance sheet are managed by Fingrid as capital. The balance sheet according to the company's accounting is smaller than the balance sheet under the Finnish Energy Authority's regulations, in which grid assets have been measured at the regulatory present value in use. The company's borrowings are presented at their carrying amount also on the regulatory balance sheet. Equity on the accounting balance sheet is naturally smaller than equity on the regulatory balance sheet, which balances out the difference in the grid asset carrying amount and the actual present value in use.

The company must have a solid capital structure to support consistently strong credit ratings, reasonable cost of capital and adequate dividend pay-out capability. The principal aim of Fingrid's capital management and grid asset management is to ensure uninterrupted operations and value retention as well as rapid recovery from any exceptional circumstances.

The company aims to maintain a credit rating of at least 'A-'. The company has not set specific key figure targets for accounting balance sheet or regulatory balance sheet capital management, but instead monitors and controls the overall situation, for which credit ratings and their underlying risk analyses and other parameters create a foundation.

The company's credit rating remained high in 2020. This reflects the company's strong overall financial situation and debt service capacity. Fingrid has credit rating service agreements with S&P Global Ratings (S&P) and Fitch Ratings (Fitch). The credit ratings valid on 31 December 2020 remained high and were as follows:

- S&P's rating for Fingrid's unsecured senior debt and long-term company rating at 'AA-' and the short-term company rating at 'A-1+', with a stable outlook.
- Fitch's rating for Fingrid's unsecured senior debt at 'A+', the long-term company rating at 'A', and 'F1' for the short-term company rating, with a stable outlook. The rating is the highest assigned by Fitch to any regulated TSO in Europe.

6.2 The aims and organisation of financing activities and the principles for financial risk management

The company has a holistic approach to the management of financing activities, encompassing external financing, as well as managing liquidity, counterparty and financial risks, and supporting business operations in matters related to financing in general.

Core aims for financing activities:

- Protecting shareholder value by securing the financing required for the company's business operations, by hedging against the main financial risks and by minimising financial costs within the risk limits;
- Maintaining adequate liquidity even in unexpected situations;
- Long-term financing from diverse sources, taking into account the company's investment plan and cash flow from operating activities as well as credit rating and its criteria;
- Overall optimisation of the interest rate risk, including the interest rate risk of business operations via the Energy Authority's regulatory model (risk-free interest in the so called WACC model) and the company's interest rate risk of net debt;

FINGRID OYJ
www.fingrid.fi

5 March 2021

- Forward-looking financial planning to ensure that the overall impact from the cash flow from operating activities, future investments, maturing loans and future dividends is taken into account when raising funds and optimising the loan portfolio structure.

The Treasury maintains active and consistent dialogue with the credit rating agencies and monitors the key ratios used by the agencies, as well as other generally accepted financial ratios.

Fingrid's financial capital consists of equity and debt financing. The share of equity from the balance sheet total was 27.4% and that of liabilities 72.6% in 2020. The IFRS 16 standard reduced the share of equity by 0.4% points. Regulatory equity was 60.2% and liabilities were 39.8% of the regulatory balance sheet in 2020.

Capital structure 2020

Fingrid Oyj is exposed to market, liquidity, counterparty and credit risks, among others, when the company's financial position is managed. The objective of financial risk management is to foster shareholder value by securing the financing required for the company's business operations, by hedging against the main financial risks and by minimising financing costs within the risk limits.

Corporate finance principles

The Board of Directors of Fingrid Oyj approves the Corporate Finance Principles which define how Fingrid Oyj manages financing as a whole. The external financing of Fingrid Group is carried out by Fingrid Oyj.

Risk management execution and reporting

Fingrid's Chief Financial Officer is responsible for the practical measures related to securing financing and managing financial risks, in line with the company's Corporate Finance Principles and Treasury Policy. The CFO oversees the day-to-day organising, reporting and adequate controls of financing activities, and reports regularly to the CEO and the Board (Audit Committee).

Risk management processes

The Treasury unit is in charge of risk monitoring, systems and the models and methods used to calculate and assess risks. The Treasury unit is furthermore responsible for identifying, measuring and reporting the financial risks that the company may be exposed to. An internal audit of Fingrid's financing activities was carried out in 2020. The audit did not reveal any critical or significant control deficiencies. According to the audit report, the company's financing activities are described extensively in the corporate policies and guidelines, and the related reporting practices are systematic.

Fair value hierarchy

In the presentation of fair value, assets and liabilities measured at fair value are categorised into a three-level hierarchy. The appropriate hierarchy is based on the input data of the instrument. The level is determined on the basis of the lowest level of input for the instrument that is significant to the overall fair value measurement.

Level 1: inputs are publicly quoted in active markets.

Level 2: inputs are not publicly quoted and are based on observable market parameters either directly or indirectly.

Level 3: inputs are not publicly quoted and are unobservable market parameters.

6.3 Financial liabilities, financial costs and managing the financial risks

The company takes advantage of the opportunities offered by credit ratings at any given time on the international and domestic money markets. Market-based and diversified financing is sought from several sources. The goal is a balanced maturity profile.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Fingrid's existing loan agreements, debt or commercial paper programmes are unsecured and do not include any financial covenants based on financial ratios.

The company operates in the debt capital, commercial paper and loan markets:

- For long-term financing, the company has an international Medium Term Note Programme ("EMTN Programme"), totalling EUR 1.5 billion.
- Fingrid has an international Euro Commercial Paper Programme ("ECP Programme") totalling EUR 600 million.
- Fingrid has a domestic commercial paper programme totalling EUR 150 million.
- Furthermore, Fingrid has bilateral loan agreements with commercial banks, mainly with the European Investment Bank (EIB) and the Nordic Investment Bank (NIB).

Green financing

Green financing is an important part of Fingrid's financing strategy and responsible operating model. Fingrid was the first Finnish company to issue a Green Bond in 2017. Green Bonds are used to finance projects that are expected to have long-term net positive environmental impacts. Green Bond projects connect renewable energy production to Fingrid's transmission network, reduce electricity transmission losses and create smart solutions that save energy and the environment. Fingrid annually reports on the impacts of its Green Bond projects by publishing a separate impact report on its website under Investors. The company's objective is to increase the share of green financing in its total financing.

Fingrid's EMTN programme and bonds are listed both on the London Stock Exchange and on the Irish Stock Exchange (Euronext Dublin). Dual listing enables the trading of debt issues and new debt issue listings on these two stock exchanges.

The graph below illustrates Fingrid's various sources of debt financing. Fingrid sources debt financing mainly from the international debt capital markets.

Total debt by source 2020

Borrowings are as follows:

14. BORROWINGS, €1,000	2020			2019			Hierarchy level
	Fair value	Balance sheet value	%	Fair value	Balance sheet value	%	
Non-current							
Bonds	822,574	731,301		701,100	613,921		Level 2
Loans from financial institutions	277,668	272,554		249,487	240,216		Level 2
	1,100,242	1,003,855		950,588	854,138		
Lease liabilities		28,913			30,515		
		1,032,767	88%		884,652	79%	
Current							
Bonds				50,136	50,000		Level 2
Loans from financial institutions	67,925	67,662		18,900	17,662		Level 2
Other loans/Commercial papers (international and domestic)	72,090	72,155		165,106	165,315		Level 2
	140,014	139,817		234,142	232,978		
Lease liabilities		2,328			2,371		
		142,145	12%		235,349	21%	
Total	1,240,256	1,174,913	100%	1,184,730	1,120,001	100%	

The fair values of borrowings are based on the present values of cash flows. Loans raised in various currencies are measured at the present value on the basis of the yield curve of each currency. The discount rate includes the company-specific and loan-specific risk premium. Borrowings denominated in foreign currencies are translated into euros at the fixing rate quoted by the ECB at the closing date.

Debt maturity profile, MEUR

Non-current financial liabilities in the graph above include a total of EUR 31.2 million in lease liabilities in accordance with IFRS 16.

Managing the market risks of debt

Fingrid's borrowings are issued in both fixed and floating interest rates and in several currencies. They thus expose Fingrid's cash flow to interest rate and exchange rate risks. Fingrid uses derivative contracts to hedge against these risks. Fingrid generally holds issued bonds to maturity and thus does not value its bonds in the balance sheet at fair value or hedge against the fair value interest rate risk. The permitted hedging instruments are defined in the Treasury policy and are chosen in order to achieve the most effective hedging possible for the risks in question.

The functional currency of the company is euro. Generally, currency risks and the foreign exchange interest rate risk are fully hedged. A risk that amounts to less than EUR 5 million when realised can be left unhedged for reasons of cost-effectiveness.

Transaction risk

Total debt in original currency 2020, MEUR

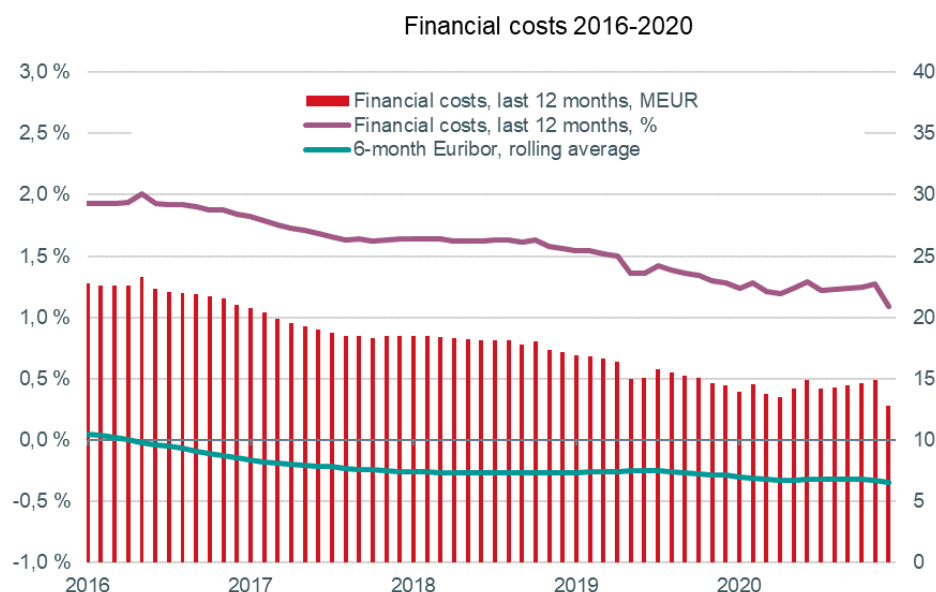

FINGRID OYJ
www.fingrid.fi

5 March 2021

The company issues bonds in the international and domestic money and debt capital markets. The company's debt portfolio is spread across euro-denominated and non-euro-denominated currencies. The total foreign-currency-denominated debt portfolio and the related interest rate flows are hedged against the currency risk. The currency risk for each bond is always fully hedged in conjunction with its issuance. The company uses interest rate and cross currency swaps to hedge the exchange rate and interest risk of bonds.

Business-related currency risks are small and they are mainly hedged. During the financial year, the company used foreign exchange forwards to hedge business transaction risks. A summary of the derivatives is presented in Note 23.

The graph 'Financial costs 2016–2020' does not include IFRS 16 interest expenses.

Interest rate risk

The company is only exposed to euro denominated interest rate risk from its business operations, assets and borrowings. The company's borrowings are, both in terms of principal and interest payments, fully hedged against exchange rate risks. Cash and cash equivalents and financial assets recognised in the income statement at fair value are denominated in euros.

Interest rate risk management includes optimisation of future interest rate risk of business operations (risk-free interest in the WACC model described in the next infobox) emerging from the regulatory model specified by the Energy Authority, together with company's net debt interest rate risk.

The interest rate risk from business operations can in part or in its entirety be hedged in terms of the adjusted capital committed to grid operations. The Board of Directors makes a separate decision on the hedging of operational interest rate risks. The interest rate risk included in business operations was not hedged in 2020. The interest rate risk inherent in Fingrid's business operations is caused by changes in the risk-free interest in the WACC model. If the risk-free interest rate rises/falls by one percentage unit, the post-tax WACC rises/falls by 0.9%.

The objective of managing the interest rate risk on the loan portfolio is to minimise interest costs in the long term. The aim is to keep the average interest rate period of the gross interest exposure for the loan portfolio (derivatives and liabilities) at around twelve (12) months. The loan portfolio's interest rate risk arises from market interest rate volatility, which decreases or increases the annual interest expenses on the company's floating-rate loans. When market interest rates increase/decrease, the interest expenses of the floating-rate loans also increase/decrease. The company hedges this so-called cash flow risk with derivatives. The sensitivity of the loan portfolio to interest rate risk is measured by using a Cash Flow at Risk (CFaR) type of model, more specifically the Autoregressive Integrated Moving Average (ARIMA) model. The key parameters of the model are the 3-month and 6-month Euribor rates, of which the historical time series serve as a basis for a forward-looking simulation of the probable future interest expenses for Fingrid's loan portfolio. The exposure on which the sensitivity analysis is calculated includes all of the Group's interest-bearing borrowings, the loan portfolio's derivatives and interest-rate options purchased to hedge against unexpected changes in interest rates. According to the model, there is a 95% (99%) probability that Fingrid's interest expenses will amount to no more than EUR 16.1 (17.6) million during the next 12 months.

Determination of the reasonable rate of return in regulation and operational interest rate risk

The reasonable rate of return on adjusted capital committed to grid operations is determined by using the weighted average cost of capital model (WACC). The WACC model determined by the Finnish Energy Authority illustrates the average cost of the capital used by the company, where the weights are the relative values of equity and debt. The weighted average of the costs of equity and interest-bearing debt are used to calculate the total cost of capital, i.e. the reasonable rate of return per the regulation. The reasonable return is calculated by multiplying the adjusted capital invested in network operations by the WACC.

$$WACC_{post-tax} = C_E \times \frac{E}{E+D} + C_D \times (1 - ctr) \times \frac{D}{E+D}$$

$WACC_{post-tax}$ = reasonable rate of return after corporate tax

C_E = reasonable cost of equity

C_D = reasonable cost of interest-bearing debt

E = adjusted equity invested in network operations

D = adjusted interest-bearing debt invested in network operations

ctr = current rate of corporate tax

$$C_D = R_r + DP$$

R_r = risk-free interest rate

DP = risk premium of debt

$$C_E = R_r + \beta_{levered} \times (R_m - R_r) + LP$$

R_r = risk-free interest rate

$\beta_{levered}$ = levered beta

R_m = average market return

$R_m - R_r$ = market risk premium

LP = liquidity premium

The above-mentioned reasonable rate of return after taxes is then adjusted with the current rate of corporate tax. This calculation gives the reasonable pre-tax rate of return.

$$WACC_{pre-tax} = \frac{WACC_{post-tax}}{(1 - ctr)}$$

$WACC_{pre-tax}$ = reasonable rate of return before corporate tax

A fixed capital structure is applied to the TSO, whereby the weight of debt capital is 50% and the weight of equity capital is 50%. The pre-tax reasonable rate of return is calculated as follows:

$$WACC_{pre-tax} = \frac{C_E \times 0,5}{(1 - ctr)} + C_D \times 0,5$$

$$R_{k,pre-tax} = WACC_{pre-tax} \times (E+D)$$

$R_{k,pre-tax}$ = pre-tax reasonable return, EUR

$WACC_{pre-tax}$ = reasonable rate of return, %

E = adjusted equity invested in network operations, EUR

D = adjusted interest-bearing debt invested in network operations, EUR

$E + D$ = adjusted capital invested in network operations, EUR

Parameter	Value to be applied
Risk-free rate (R_f)	Greater of: a) 10-year average of 10-year Finnish government bond rate b) Average of previous year April-September government bond rate
Asset beta ($\beta_{Unlevered}$)	0.4
Market risk premium ($R_m - R_f$)	5.0%
Liquidity premium (LP)	0.6%
Capital structure (D/E)	50/50
Risk premium of debt (DP)	1.26%
Tax rate (t)	20%

Liquidity risk

Fingrid is exposed to liquidity and refinancing risks arising from the redemption of loans, payments and fluctuations in cash flow from operating activities. The liquidity of the company must be arranged so that liquid assets (cash and cash equivalents, and financial assets recognised in the income statement at fair value) and available long-term committed credit lines can cover 110% of the refinancing needs for the next 12 months.

The company has a revolving credit facility agreement of EUR 300 million signed on 11 December 2015. The maturity of the facility is five years. In addition to this, the company has two one-year extension options, of which both have been used. These extended the maturity of the revolving credit facility until 11 December 2022. The facility is committed and has not been drawn. The company additionally has a total of EUR 225 million in committed and uncommitted bilateral facility arrangements with banks.

The refinancing risk is managed by building an even maturity profile such that the share of long-term loans in a single year constitutes less than 30 per cent of the total debt and the average maturity of the company's loan portfolio is at least three years. To secure refinancing, the company makes wide use of diverse sources of financing. The high credit rating and good bank and investor relations enable ready access to the debt capital market and thus minimises the company's debt refinancing risks and financing costs.

The counterparty risks of financing activities are caused by counterparties related to investing (e.g. money market funds), derivatives counterparties and bank counterparties. The company minimises any counterparty risks. As a rule, credit rating categories are the decisive factor in specifying the counterparty limit.

Contractual repayments and interest costs on borrowings are presented in the next table. The interest rates on floating-rate loans are defined using the zero coupon curve. The repayments and interest amounts are undiscounted values. Finance costs arising from interest rate swaps are often paid in net amounts depending on the nature of the swap. In the following table, they are presented in gross amounts.

18. PAYMENTS UNDER FINANCING AGREEMENTS IN CASH, €1000

Accounting principles

Borrowings

Borrowings are initially recognised at fair value net of the transaction costs incurred. Transaction costs consist of bond prices above or below par value, arrangement fees, commissions and administrative fees that are directly related to the loan. Borrowings are subsequently measured at amortised cost; any difference between the loan amount and the amount to be repaid is recognised in the income statement over the loan period using the effective interest rate method. Borrowings are derecognised when they mature and are repaid.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Commitment fees to be paid on credit facilities are entered as transaction costs related to the loan insofar as partial or full utilisation of the facility is likely. In such cases, the fee is capitalized in the balance sheet until the facility is utilised. If there is no proof that loans included in a facility are likely to be drawn in part or in full, the fee will be recognised as an upfront payment for liquidity services and amortized over the maturity of the facility in question.

6.4 Cash and cash equivalents and other financial assets

19. CASH AND CASH EQUIVALENTS, €1,000	2020	2019
Cash assets and bank account balances	45,645	15,626
Total	45,645	15,626

20. OTHER FINANCIAL ASSETS, €1,000	2020	2019	Hierarchy level
Short-term fixed income funds	80,243	67,188	Level 1
Total	80,243	67,188	

Accounting principles

Cash and cash equivalents

Cash and cash equivalents in the balance sheet include cash in hand and bank deposits with an initial maturity of no more than three months. Cash and cash equivalents in the cash flow statement also include financial assets recognised in the income statement at fair value. Cash and cash equivalents are derecognised when they mature, are sold or otherwise disposed of.

Other financial assets

The financial assets classified in this category may include short-term money market securities (certificates of deposit, commercial papers and municipality bills), current investments in short-term fixed income funds, and bank deposits kept for more than three months. Financial assets recognised at fair value in the income statement are entered in the balance sheet at fair value at the settlement date. Subsequently, the financial assets are measured on each reporting day at fair value, and the change in their fair value is recognised in the income statement under finance income and costs. Derivatives are also included in this group, but are presented in the balance sheet on their own lines. Accounting principles for derivatives are disclosed in Chapter 6.6.

Available-for-sale investments

Fingrid does not have financing assets classified as available-for-sale investments.

Financial assets are derecognised when they mature, are sold or otherwise disposed of such that their risks and revenues have been transferred.

6.5 Equity and dividend distribution

The shareholders' equity is composed of two share classes. The shareholder breakdown and voting rights are illustrated in the following graphs.

Shareholders 31 Dec 2020

Voting rights 31 Dec 2020

FINGRID OYJ

Total	3,325	100.00	100.00

The company's share capital is EUR 55,922,485.55. Fingrid shares are divided into Series A shares and Series B shares. The number of Series A shares is 2,078 and the number of Series B shares is 1,247.

The maximum number of shares is 13,300, as in 2019. The shares have no par value.

Series A shares confer three votes each at the Annual General Meeting and Series B shares one vote each. When electing members of the Board of Directors, Series A shares confer 10 votes each at the Annual General Meeting and Series B shares one vote each.

Series B shares have the right before Series A shares to obtain the annual minimum dividend specified below from the funds available for profit distribution. If the annual minimum dividend cannot be distributed in some year, the shares confer a right to receive the undistributed amount from the funds available for profit distribution in the subsequent years; however, such that Series B shares have the right over Series A shares to receive the annual minimum dividend and the undistributed amount.

Fingrid Oyj's Annual General Meeting decides on the annual dividend

Eighty-two per cent of the dividends to be distributed for each financial year is distributed for all Series A shares and eighteen per cent for all Series B shares, however such that EUR twenty million of the dividends to be distributed for each financial year is first distributed for all Series B shares. If the above-mentioned EUR twenty million minimum amount for the financial period is not distributed (all or in part) for Series B shares in a financial period, Series B shares confer the right to receive the undistributed minimum amount in question (or the accumulated undistributed minimum amount accrued during such financial periods) in the next profit distribution, in any disbursements paid out, or in any other distribution of assets prior to any other dividends, disbursements or asset distribution until the undistributed minimum amount has been distributed in full for Series B shares. There are no non-controlling interests.

Equity is composed of the share capital, share premium account, revaluation reserve (incl. fair value reserve), translation reserve, and retained earnings. The translation reserve includes translation differences in the net capital investments of associated companies in accordance with the equity method of accounting. The profit for the financial year is booked in retained earnings.

Share premium account

The share premium account includes the difference between the counter value of the shares and the value obtained. The share premium account consists of restricted equity as referred to in the Finnish Limited Liability Companies Act. The share capital can be increased by transferring funds from the share premium account. The share premium account can be decreased in order to cover losses or, under certain conditions, it can be returned to the owners.

Changes to equity funds during the financial year are presented in the statement of changes in equity.

21. SHAREHOLDERS BY CATEGORY

	Number of shares	Of all shares %	Of votes %
The share capital is broken down as follows			
Series A shares	2,078	62.50	83.33
Series B shares	1,247	37.50	16.67
Total	3,325	100.00	100.00

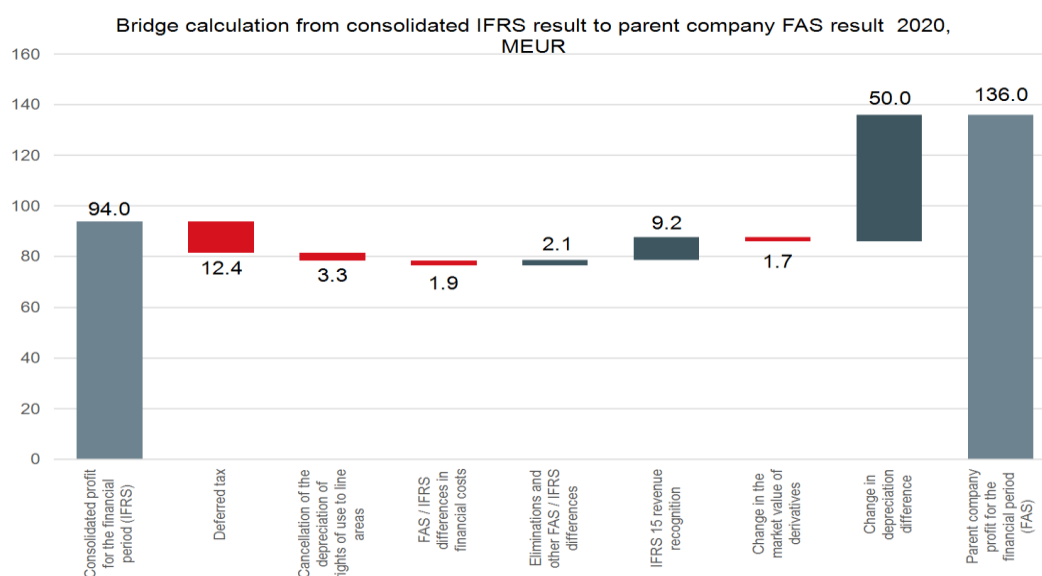

Fingrid's dividends are distributed such that the shareholders receive a reasonable return on their invested capital, but also such that the company's financial position remains stable.

Fingrid Oyj's distributable funds in the financial statements total EUR 186,751,302.32. Based on the 2019 financial statements, EUR 148.2 million was paid in dividends (EUR 171.4). Since the closing date, the Board of Directors has proposed to the Annual General Meeting of shareholders that, on the basis of the balance sheet adopted for the financial period that ended on 31 December 2020, a dividend of EUR 53,500.00 at maximum per share be paid for Series A shares and EUR 19,600.00 at maximum for Series B shares, for a total of EUR 135,614,200.00 at maximum. The dividends shall be paid in two instalments. The first instalment of EUR 35,500.00 for each Series A share and EUR 13,000.00 for each Series B share, totalling EUR 89,980,000.00, shall be paid on 12 April 2021. The second instalment of EUR 18,000.00 at maximum per share for each Series A share and EUR 6,600.00 at maximum per share for each Series B share, totalling EUR 45,634,200.00 at maximum in dividends, shall be paid subject to the Board's decision after the half-year report has been confirmed, based on the authorisation given to the Board in the Annual General Meeting. The Board has the right to decide, based on the authorisation granted to it, on the payment of the second dividend instalment after the half-year report has been confirmed and it has assessed the company's solvency, financial position and financial development. The dividends that have been decided on with the authorisation given to the Board shall be paid on the third banking day after the decision. It will be proposed that the authorisation remains valid until the next Annual General Meeting.

The distributable funds are calculated on the basis of the parent company's equity. Dividends are paid based on the distributable funds of the parent company.

The guiding principle for Fingrid's dividend policy is to distribute substantially all of the parent company profit as dividends. When making the decision, however, the economic conditions, the company's near-term capital expenditure and development needs as well as any prevailing financial targets of the company are always taken into account.

The graph below indicates the differences between the consolidated IFRS income statement and the parent company's FAS income statement.

Accounting principles

Dividend distribution

The Board of Directors' proposal concerning dividend distribution is not recorded in the financial statements. The liability and equity is recognised only after a decision is made by the Annual General Meeting of Shareholders.

6.6 Summary of financial assets, financial liabilities and derivatives

The carrying amounts of Fingrid's financial assets and liabilities by measurement category are as follows:

22. CARRYING AMOUNTS OF FINANCIAL ASSETS AND LIABILITIES BY MEASUREMENT CATEGORY, €1,000

Financial liabilities total	6,886		1,227,689	1,234,574	

At the end of the year, the company's borrowings included a total of EUR 31.2 million in lease liabilities in accordance with IFRS 16, consisting of EUR 2.3 million in short-term liabilities, to be paid within a year, and EUR 28.9 million in long-term liabilities, with a maturity date after more than a year.

Fingrid uses derivatives for hedging purposes only, even though the company does not apply hedge accounting. Bilateral derivative transactions require a valid International Swap Dealers Association's (ISDA) Master Agreement with the counterparty. The derivatives falling under the scope of an ISDA agreement can be netted in conditional circumstances such as default or bankruptcy. The company had derivatives that can be netted as per ISDA at a total fair value of EUR 26.2 million in 2020 (22.4). The management of electricity price risk is described in chapter 4.7. The hedging of interest rate and foreign exchange risks is described in chapter 6.3.

The company's derivative transactions consist of interest rate and cross currency swaps for hedging the loan portfolio, as well as purchased cap options used to mainly hedge the loan portfolio from a sudden change in short-term interest rates. Forward contracts are used to fix the exchange rate for non-euro-denominated contracts related to business operations. The company uses electricity futures and forwards to hedge the price risk of future loss power purchases.

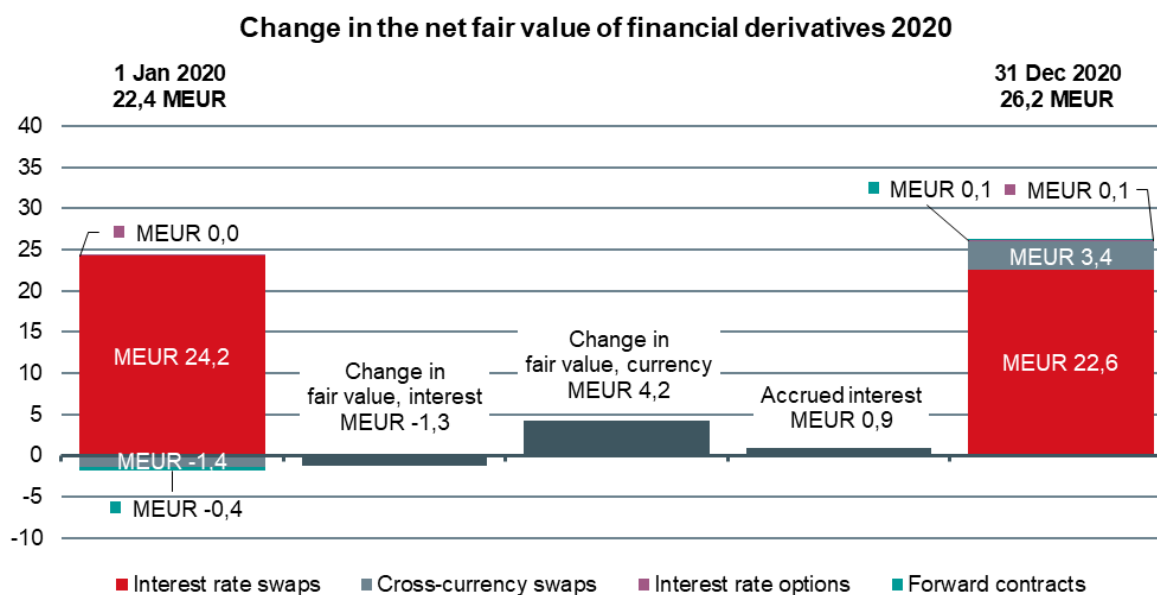

The table below includes all of the Group's derivatives.

23. DERIVATIVE INSTRUMENTS, € 1,000

The net fair value of derivatives indicates the realised profit/loss if they had been closed on the last trading day of 2020. The net fair value cannot be used for deriving the net derivative liabilities or receivables in the balance sheet, as accrued interest is taken into account here.

The graph below indicates the change of value of all of the company's currency and interest rate derivatives in 2020.

FINGRID OYJ
www.fingrid.fi

5 March 2021

The purpose of Fingrid's loss power price hedging is to reduce the effect of volatility in market prices on the loss power procurement costs and to give adequate predictability in order to keep the pressures to change transmission fees moderate. The change in the fair value of the electricity derivatives used for hedging the price of Fingrid's loss power purchases recognised in the operating profit was EUR 2.8 positive (EUR 26.5 million negative). The volatility in the fair value of electricity derivatives can be significant. The positive impact on profit resulted from the effect of higher market quotations for electricity derivatives on the fair value of the electricity derivatives. Fingrid holds its bought derivatives to maturity.

The sensitivity of the fair value of electricity derivatives in relation to changes in the price of electricity is measured as the difference a 10 per cent fluctuation in market price would have on outstanding electricity derivatives on the reporting date. An increase/decrease of 10 per cent in the market price of electricity would have an impact of EUR 11.3 million/EUR –11.3 million on the Group's profit before taxes.

The graph below illustrates the net fair value of the company's electricity derivatives and the change in it in 2020.

Accounting principles

FINANCIAL INSTRUMENTS

Classification of financial assets and liabilities

The Group classifies the financial assets and liabilities in accordance with its business model and in compliance with IFRS 9. The classification is accomplished on the basis of the objective of the business model and the contract-based cash flows from the investments or by applying the fair value option at initial recognition.

Other financial assets can include investments in short-term money-market securities (certificates of deposit, commercial papers and municipality bills), bank deposits of more than three months and investments in short-term fixed income funds.

Investments in short-term fixed income funds have been classified and entered at fair value in the income statement.

Investments in short-term money-market securities are classified and entered at amortised cost according to the accounting model applied by the company. The goal is to keep the investments to maturity and collect the contractual cash flows, consisting of the payments of principal and interest. Money-market securities have previously been entered at fair value in the income statement, but the change did not have a material impact on the company's financial result.

Bank deposits of more than three months are entered at amortised cost.

The Group actively tests each instrument for impairment and if the impairment criteria are met, the impairment is entered in the income statement. The accounting procedure for financial assets has not changed, and they continue to be entered at amortised cost. The rules concerning balance sheet derecognition have not changed from the IAS 39 standard 'Financial Instruments: Recognition and Measurement'.

The Group does not apply hedge accounting, and the rules applied to hedge accounting according to IFRS 9 do not affect the company's accounting procedures.

Cash and cash equivalents

Cash and cash equivalents consist of cash in hand and bank deposits with an initial maturity of no more than three months.

Accounting principles

Derivative instruments

Derivatives are initially recognised at fair value according to the date the derivative contract is entered into, and are subsequently re-measured at fair value. Changes in the fair value of derivatives are recognised in profit and loss. The company uses derivative contracts only for hedging purposes according to the Corporate Finance principles, the Treasury policy and the loss energy policy.

Electricity derivatives

The company enters into electricity derivative contracts in order to hedge the price risk of electricity purchases in accordance with the loss power forecast. Fingrid discontinued hedge accounting for electricity derivatives at the beginning of 2014. As a result, the entire change in the fair value of electricity derivatives is recorded in the income statement.

Interest and currency derivatives

The company enters into derivative contracts in order to hedge financial risks (interest rate and foreign exchange exposure) in compliance with the Corporate Finance Principles approved by the Board of Directors. Fingrid does not apply hedge accounting to these derivatives. A derivative asset or liability is recognised at its original fair value. Derivatives are measured at fair value at the closing date, and the change in fair value is recognised in the income statement under finance income and costs.

The fair values of derivatives at the closing date are based on different calculation methods. Foreign exchange forwards have been measured at the forward prices. Interest rate and currency swaps have been measured at the present value on the basis of the yield curve of each currency. Interest rate options have been valued using generally accepted option pricing models in the market.

7 OTHER INFORMATION (IFRS)

- **This chapter contains the rest of the notes.**
- **First comes a joint presentation of the Group companies and related parties' data.**
- **After that, other notes follow in the same sequence they appear in the income statement and balance sheet.**

7.1 Group companies and related parties

The Group has two Fingrid's wholly-owned subsidiaries, Finextra Oy and Fingrid Datahub Oy.

Finextra Oy is a subsidiary wholly-owned by Fingrid Oyj established to handle the statutory public service obligations not included in actual grid operations or transmission system responsibility. These tasks include peak load capacity services and guarantee-of-origin services for electricity. Through Finextra, the cost of public service tasks is separated from the cost of grid operations, which makes it possible to ensure the unequivocal transparency of the different operations. The Energy Authority oversees Finextra's operations and reasonable returns from its services. The aim of Finextra is to carry out the assigned duties cost effectively, making use of joint resources. The allowed annual return on peak load capacity services is EUR 75,000. The allowed return on guarantee-of-origin services for the regulatory period started on 1 January 2020 was approximately EUR 43,000. The realised return during the regulatory period consisted of a surplus of roughly EUR 30,000.

Fingrid Datahub Oy is a subsidiary wholly-owned by Fingrid Oyj established in 2016 to handle the operations linked to the datahub. Key duties of the subsidiary is to offer and develop centralised electricity market information exchange services and other related services to the market parties and to govern the register information required by the electricity markets. The datahub is a centralised information exchange system for retail markets that stores data from all of Finland's 3.5 million electricity metering points. The information stored in the datahub will be utilised by around 100 electricity sales companies and more than 80 distribution network operators to provide services to the consumers of electricity. Fingrid started the datahub project during the spring of 2015.

The consolidated associated company is eSett Oy (ownership 25.0%).

Fingrid Oyj carried out, together with the other shareholders, a share trade transaction in which 66% of the shares in Nord Pool Holding AS were sold to Euronext Nordics Holding AS, a Norwegian company fully owned by Euronext N.V. Fingrid's indirect ownership in Nord Pool is now 6.4%, which is managed through TSO Holding AS, a holding company jointly owned by the transmission system operators and of which Fingrid owns 18.8%. Fingrid Oyj's holding in TSO Holding AS is accounted for in the 'Other long-term investments' section in the balance sheet.

The investments in associated companies included in the balance sheet are composed of the following:

24. INVESTMENTS IN ASSOCIATED COMPANIES, € 1,000	2020	2019
Non-current		
Interests in associated companies	1,806	11,012
Loan receivables from associated companies	563	1,125
Current		
Loan receivables from associated companies	375	188
Total	2,744	12,325

Receivable from an associated company consists of a loan receivable from eSett Oy. The main terms and conditions are as follows:

Associated company loan:

The loan capital is EUR 0.9 (1.3) million and the annual interest rate is 1.5 per cent, on top of the 12-month Euribor. The loan repayment is ten equal instalments every six months. The amount of the loan capital is one quarter of the total loan that eSett's owners have granted the company proportionate to their holdings. The terms of the loan are the same as the loan terms for eSett's other owners.

There are no material temporary differences related to associated companies on which deferred tax assets or liabilities have been recognised.

The subsidiaries, associated companies and parent company (Fingrid Oyj) described above are related parties of the Group. In addition, the shareholder entities mentioned in chapter 6.5 and the top management and its related parties are also considered related parties. The top management is composed of the Board of Directors, the President & CEO, and the executive management group. All transactions between Fingrid and related parties take place on market terms. The company has not lent money to the top management, and the company has no transactions with the top management. At the close of the reporting period, the Republic of Finland owned 53.1 per cent of the company's shares. The Finnish Parliament has authorised the Ministry of Finance to reduce the state's ownership in Fingrid Oyj to no more than 50.1 per cent of the company's shares and votes.

Accounting principles

Subsidiaries

The subsidiaries encompass all companies over which the Group has control (including structured entities). The Group is considered to have control over a company if the Group's holding results in exposure to variable returns or if the Group is

entitled to variable returns and it can influence these returns by exercising its control over the company. The subsidiaries are consolidated into the consolidated financial statements starting from the day on which the Group gained control over the company. Consolidation is discontinued once the control ceases to exist.

Consolidation of operations is carried out using acquisition cost method.

Transactions, receivables and liabilities between Group companies and any unrealised profits from internal transactions are eliminated. Unrealised losses are also eliminated unless the transaction indicates an impairment of the disposed asset. If necessary, the financial statements of the subsidiaries have been adjusted to correspond to the accounting principles applied by the Group.

Associated companies

The associated companies include all companies over which the Group has significant influence but no control or joint control. This is generally based on a shareholding amounting to 20–50% of the votes.

Investments in associated companies are initially recognised at the acquisition cost and subsequently handled using the equity method. According to the equity method, investments are initially recorded at the acquisition cost and this is subsequently adjusted by recognising the Group's share of the profit or loss after the time of acquisition in the income statement and the Group's share of any changes in the investment object's other comprehensive income in other comprehensive income. Any dividends received or to be received from the associated companies and joint ventures are deducted from the investment's carrying amount.

If the Group's share of the losses of an investment recognised according to the equity method equals or exceeds the Group's holding in the company in question, including any other non-current receivables without collaterals, the Group will not recognise any additional losses unless it has obligations or it has made payments on behalf of the company.

A share corresponding to the Group's ownership interest is eliminated from the unrealised profits between the Group and its associated companies and joint ventures. Any unrealised losses are also eliminated unless the transaction indicates an impairment of the disposed asset. If necessary, the accounting principles applied by the investments to be recognised according to the equity method have been adjusted to correspond to the principles applied by the Group.

7.2 Other notes

Emission rights

Fingrid's reserve power plants are subject to an environmental permit and covered by the EU's emissions trading scheme. Fingrid has not been granted free-of-charge emission rights for the emissions trade period 2013–2020. Emission rights purchased in 2020 amounted to 4,000 units (tCO₂). Emissions trading had minor financial significance for Fingrid. CO₂ emissions included in emissions trading totalled 5,020 tonnes in 2020 (5,142).

Accounting principles

Emission rights

Emission rights acquired free of charge are recognised in intangible assets at their nominal value, and purchased emission rights at their acquisition cost. A liability is recognised for emission rights to be returned. If the Group has sufficient emission rights to cover the return obligations, the liability is recognised at the carrying amount corresponding to the emission rights in question. If there are not sufficient emission rights to cover the return obligations, the liability is recognised at the market value of the emission rights in question. No depreciation is recognised on emission rights. They are derecognised in the balance sheet at the time of transfer when the actual emissions have been ascertained. The expense resulting from the liability is recognised in the income statement under the expense item 'Materials and services'. Capital gains from emissions rights are recognised under other operating income.

25. PROVISIONS, € 1,000

	2020	2019
Provisions for creosote-impregnated towers 1 Jan	1,393	1,424
Provisions used	-26	-31
Provisions 31 Dec	1,368	1,393

Accounting principles

Provisions

A provision is recorded when the Group has a legal or factual obligation based on an earlier event and it is likely that fulfilling the obligation will require a payment, and the amount of the obligation can be estimated reliably. The provisions are valued at the present value of the costs required to cover the obligation. The discounting factor used in calculating the present value is chosen so that it reflects the market view of the time value of money at the assessment date and the risks pertaining to the obligation.

26. COMMITMENTS AND CONTINGENT LIABILITIES, €1,000

	2020	2019
Pledges	490	490
Other financial commitments		
Rent security deposit, guarantee	38	38
Credit facility commitment fee and commitment fee:		
Commitment fee for the next year	681	414
Commitment fee for subsequent years	276	568
	994	1,020
Unrecognised investment commitments	200,141	181,973

The investment commitments consist of agreements signed by the company to carry out grid construction projects and to procure the datahub system.

Payment obligations from right-of-use agreements for reserve power plants:

In one year	8,810	8,663
In more than one year and less than five years	27,701	29,638
In more than five years	12,159	15,596
Total	48,670	53,896

Under its system responsibility, Fingrid is also obligated to maintain a rapid response disturbance reserve to prepare for disruptions to the power system. In order to ensure the availability of this disturbance reserve, Fingrid has, in addition to its reserve power plant capacity, acquired power plant capacity suited to this purpose by long-term Right-of-use agreements.

LEGAL PROCEEDINGS AND PROCEEDINGS BY AUTHORITIES

An accident took place on a worksite in Laukaa, Finland, on 25 August 2017, where an employee of Revilla y Garcia S.L. died after having fallen from a transmission line tower. A civil court case, as well as proceedings concerning social-security-based damages, have been initiated in Spain for damages against Fingrid (the client linked with the accident), the main contractor, Technolines S.R.L. filial i Finland, and its subcontractor, Revilla y Garcia S.L. Fingrid does not believe the claim against it is likely to succeed and, in Fingrid's view, the legal proceedings or their outcome are not likely to have a substantial impact on the company's earnings or financial position.

On 30 June 2020, the Market Court received an appeal on the company's decision to exclude a bidder from a competitive tender for 400-MVA transformers to be acquired in 2022–2025. The company decided to discontinue the tendering process on 14 July 2020. After the decision to discontinue the tendering process, the appeal to the Market Court was withdrawn on 28 July 2020.

EVENTS AFTER THE CLOSING DATE

Fingrid Group's profit for the 2021 financial period, excluding changes in the fair value of derivatives and before taxes, is expected to improve somewhat compared to 2020.

Results forecasts for the financial year are complicated especially by the uncertainty related to grid service revenue, ITC income and cross-border transmission income, and to reserve and loss power costs. These are dependent on the variations in outside temperature, precipitation, windiness, and hydrological conditions in the Nordic countries, which affect electricity consumption and electricity prices in Finland and neighbouring areas and thus also grid transmission volumes. The company's debt service capacity is expected to remain stable.

GROUP'S CONTACT INFORMATION AND APPROVAL OF THE FINANCIAL STATEMENTS

Fingrid Oyj is a Finnish public limited liability company incorporated under the Finnish Companies Act. Fingrid's consolidated financial statements have been drawn up in accordance with the International Financial Reporting Standards (IFRS) as adopted by the EU. Fingrid's registered office is in Helsinki at the address P.O. Box 530 (Läkkisepäntie 21, 00620, Helsinki), 00101 Helsinki.

A copy of the consolidated financial statements is available on the website fingrid.fi or at Fingrid Oyj's head office.

The amounts in the financial statements are expressed in thousands of euros and are based on the original acquisition costs, unless otherwise stated in the accounting principles or notes.

Fingrid Oyj's Board of Directors has accepted the publication of these financial statements in its meeting on 5 March 2021. In accordance with the Finnish Companies Act, the shareholders have the opportunity to adopt or reject the financial statements in the shareholders' meeting held after their publication. The shareholders' meeting can also amend the financial statements.

5 March 2021

8.4 Notes to the financial statements of parent company

1. ACCOUNTING PRINCIPLES

Fingrid Oyj's financial statements have been drawn up in accordance with the Finnish Accounting Standards (FAS). The items in the financial statements are valued at original acquisition cost.

Foreign currency transactions

Commercial transactions and financial items denominated in foreign currencies are recognised at the foreign exchange mid-rate quoted by the European Central Bank (ECB) at the transaction date. Interest-bearing liabilities and receivables and the derivatives hedging these items are valued at the mid-rate quoted by the ECB at the closing date. Foreign exchange gains and losses on interest-bearing liabilities and receivables, and on the instruments hedging these items, are recognised at maturity under finance income and costs. Foreign exchange rate differences arising from the derivatives used to hedge commercial currency flows are recognised to adjust the corresponding item in the income statement.

Interest and currency derivatives

Interest rate and currency swaps, foreign exchange forwards and interest rate options are used, in accordance with the Treasury Policy, to hedge the interest rate and foreign exchange risk, as well as the commercial items, in Fingrid's balance sheet items. The accounting principles for derivative contracts are the same as for the underlying items. The interest rate items of interest rate and cross-currency swaps and interest rate options are accrued and recognised in the income statement under interest income and costs. The interest portion of forward foreign exchange contracts hedging the interest-bearing liabilities and receivables is accrued over the maturity of the contracts and recognised under finance income and costs. Premiums paid or received on interest rate options are accrued over the hedging period.

Electricity derivatives

Fingrid hedges its loss power purchases against price risk by employing futures and forwards traded on the NASDAQ OMX Oslo ASA. There can also be trading in the OTC market in instruments corresponding to Nasdaq OMX Oslo ASA's financial instruments. The profits and losses arising from these contracts are used to adjust the loss energy purchases in the income statement in the period in which the hedging impacts profit or loss.

Research and development expenses

Research and development expenses are treated as annual expenses.

Valuation of fixed assets

Fixed assets are capitalised under immediate acquisition cost. Planned straight-line depreciation on the acquisition price is calculated on the basis of the useful life of the fixed asset. Depreciation on fixed assets taken into use during the financial year is calculated on an item-by-item basis from the month of introduction.

The depreciation periods are as follows:

Goodwill	20 years
Other non-current expenses:	
Rights of use to line areas	30–40 years
Other rights of use according to useful life, maximum	10 years
Computer software	3 years
Buildings and structures	
Substation buildings and separate buildings	40 years
Substation structures	30 years
Buildings and structures at gas turbine power plants	20–40 years
Separate structures	15 years
Transmission lines	
Transmission lines 400 kV	40 years
Direct current lines	40 years
Transmission lines 110–220 kV	30 years
Creosote-impregnated towers and related disposal costs*	30 years
Aluminium towers of transmission lines (400 kV)	10 years
Optical ground wires	10–20 years
Machinery and equipment	
Substation machinery	10–30 years
Gas turbine power plants	20 years
Other machinery and equipment	3–5 years

*Disposal costs are discounted at present value and added to the value of the fixed asset and recognised under provisions for liabilities and charges.

Goodwill is depreciated over a 20-year period, since grid operations are a long-term business in which income is accrued over several decades.

FINGRID OYJ
www.fingrid.fi

5 March 2021

Emission rights

Emission rights are treated in accordance with the net procedure in conformance with statement 1767/2005 of the Finnish Accounting Board.

Valuation of inventories

Inventories are recognised according to the FIFO principle at acquisition cost, or at the lower of replacement cost or probable market price.

Cash in hand, bank receivables and financial securities

Cash in hand and bank receivables include cash assets and bank balances. Financial securities include certificates of deposit, commercial papers and investments in short-term fixed income funds. Quoted securities and comparable assets are valued at the lower of original acquisition cost or probable market price.

Interest-bearing liabilities

Fingrid's non-current interest-bearing liabilities consist of loans from financial institutions and bonds issued under the Euro Medium Term Note (EMTN) programme. The current interest-bearing liabilities consist of commercial papers issued under the domestic and international programmes and of the current portion of noncurrent borrowings and bonds maturing within a year. The outstanding notes under the programmes are denominated in euros and foreign currencies. Fingrid has both fixed and floating rate debt. The interest is accrued over the maturity of the debt. The differential of a bond issued over or under par value is accrued over the life of the bond. The arrangement fees of the revolving credit facilities are, as a rule, immediately recognised as an expense, and the commitment fees are recognised as an expense over the maturity of the facility.

Financial risk management

The principles applied to the management of financial risks are presented in chapters 6.2 and 6.3 of the Notes to the Consolidated Financial Statements.

Income taxes

Taxes include the accrued tax corresponding to the profit for the financial year as well as tax adjustments for previous financial years.

Deferred taxes

The company enters deferred tax assets for the congestion income it uses for investments, and they become taxable income and tax in the year in which they were used. The tax assets entered for congestion income are recognised in accordance with the depreciation used in taxation for investments covered by congestion income. Congestion income allocated to investments is entered as a reduction in acquisition cost. For the rest, deferred tax assets and liabilities are not recorded in the income statement or balance sheet, but are instead presented in the notes.

2. TURNOVER BY BUSINESS AREA

The business of Fingrid Oyj comprises entirely transmission grid business with system responsibility. For that reason, there is no distribution of turnover by business area.

TURNOVER, €1,000	2020	2019
Grid service income	382,730	394,857
Imbalance power sales	260,823	346,749

31 Dec 2020	2,078	1,247	3,325

Series A shares confer three votes each at the Annual General Meeting and Series B shares one vote each. When electing members of the Board of Directors, Series A shares confer 10 votes each at the Annual General Meeting and Series B shares one vote each.

Series B shares have the right before Series A shares to obtain the annual dividend specified below from the funds available for profit distribution. If the annual dividend cannot be distributed in some year, the shares confer a right to receive the undistributed amount from the funds available for profit distribution in the subsequent years; however, such that Series B shares have the right over Series A shares to receive the annual dividend and the undistributed amount.

Fingrid Oyj's Annual General Meeting decides on the annual dividend.

Eighty-two (82) per cent of the dividends to be distributed for each financial year is distributed for all Series A shares and eighteen (18) per cent for all Series B shares, however such that EUR twenty (20) million of the dividends to be distributed for each financial year is first distributed for all Series B shares. If the above-mentioned EUR twenty (20) million minimum amount for the financial period is not distributed (all or in part) for Series B shares in a financial period, Series B shares confer the right to receive the undistributed minimum amount in question (or the accumulated undistributed minimum amount accrued during such financial periods) in the next profit distribution, in any disbursements paid out, or in any other distribution of assets prior to any other dividends, disbursements or asset distribution until the undistributed minimum amount has been distributed in full for Series B shares.

There are no non-controlling interests.

The investment commitments consist of agreements signed by the company to carry out grid construction projects.		

33. LEGAL PROCEEDINGS AND PROCEEDINGS BY AUTHORITIES

An accident took place on a worksite in Laukaa, Finland, on 25 August 2017, where an employee of Revilla y Garcia S.L. died after having fallen from a transmission line tower. A civil court case, as well as proceedings concerning social-security-based damages, have been initiated in Spain for damages against Fingrid (the client linked with the accident), the main contractor, Technolines S.R.L. filial i Finland, and its subcontractor, Revilla y Garcia S.L. Fingrid does not believe the claim against it is likely to succeed and, in Fingrid's view, the legal proceedings or their outcome are not likely to have a substantial impact on the company's earnings or financial position.

On 30 June 2020, the Market Court received an appeal on the company's decision to exclude a bidder from a competitive tender for 400-MVA transformers to be acquired in 2022–2025. The company decided to discontinue the tendering process on 14 July 2020. After the decision to discontinue the tendering process, the appeal to the Market Court was withdrawn on 28 July 2020.

34. SEPARATION OF BUSINESSES IN ACCORDANCE WITH THE ELECTRICITY MARKET ACT

Imbalance power and regulating power

Each electricity market party must ensure its electricity balance by making an agreement with either Fingrid or some other party. Fingrid buys and sells imbalance power in order to stabilise the hourly power balance of an electricity market party (balance responsible party). Imbalance power trade and pricing are based on a balance service agreement with equal and public terms and conditions.

Fingrid is responsible for the continuous power balance in Finland by buying and selling balancing power in Finland. The balance responsible parties can participate in the Nordic balancing power market by submitting bids on their available capacity. The terms and conditions of participation in the regulating power market and the pricing of balancing power are based on the balance service agreement.

Fingrid is responsible for organising national imbalance settlement. As of the beginning of May 2017, Fingrid has transferred the imbalance settlement to eSett Oy, a company jointly owned by the Finnish, Swedish, Norwegian and Danish transmission system operators. The balance settlement takes place after the utilisation hours by determining the actual electricity generation, consumption and electricity trade. The outcome of the balance settlement is power balances for each party to the electricity trade.

Management of balance operation

In accordance with a decision by the Energy Market Authority, Fingrid Oyj shall separate the duties pertaining to national power balance operation by virtue of Chapter 12 of the Electricity Market Act. The management of balance operation is a part of grid operations.

The income statement of the balance service unit is separated by means of cost accounting as follows:

Income	direct
Separate costs	direct

FINGRID OYJ

Development of information exchange

It is Fingrid's task to develop the exchange of information required for electricity trade and imbalance settlement as set out in the Electricity Market Act. Fingrid's information exchange services are part of the electricity markets' information exchange environment. In order to develop the effective and accurate exchange of information, Fingrid works in close co-operation with e.g. electricity market parties, interest groups, service providers, supervisory authorities, legislators, organisations that develop national and international communications and other transmission system operators.

In accordance with a decision by the Energy Market Authority, Fingrid Oyj must separate the duties pertaining to the development of information exchange by virtue of Chapter 12 of the Electricity Market Act. The development of information exchange is a part of grid operations.

The separation of the income statement for the development of information exchange is realised by means of cost accounting as follows:

Income	direct
Separate costs	direct
Administrative costs	matching principle
Income taxes	based on result

Grid operations

Grid operations refers to licensed electricity system operation that takes place on the electricity grid. Electricity system operations are defined in Chapter 1 of the Electricity Market Act (588/2013) and grid operations are defined in Chapter 5. Of Fingrid Oyj's operations, activities related to the management of the power reserve system and guarantees of origin for electricity, as well as the datahub project that was started in 2015 are not included in grid operations. Operations that are not part of grid operations constitute 'other operations' as referred to in Chapter 12 of the Electricity Market Act and must be separated from grid operations in accordance with that Chapter.

The income statement and balance sheet of grid operations and other operations have, in compliance with Chapter 12 of the Electricity Market Act, been separated by means of cost accounting as follows:

Income	direct
Separate costs	direct
Production costs	matching principle
Administrative costs	matching principle
Depreciation	matching principle in accordance with Fingrid Oyj's depreciation principle
Finance income and costs	on the basis of imputed debt
Income taxes	based on result
Balance sheet items	matching principle

Congestion income in grid operations

The congestion income received by a grid owner must be used for the purposes stated in EC Regulation 714/2009, Article 16, Paragraph 6: guaranteeing the actual availability of the allocated capacity, and maintaining or increasing interconnection capacities through network investments. As a consequence of the change in the regulation governing Fingrid's grid pricing, the company will include the congestion income received after 1 January 2016 as accruals in the item other liabilities in the balance sheet. Of the accruals, congestion income will be recognised in the income statement as other operating income when their corresponding costs, as defined in the regulation, accrue as annual expenses in the income statement. Alternatively, they are entered in the balance sheet against investments, as defined by regulation, to lower the acquisition cost of property, plant and equipment, which lowers the depreciation of the property, plant and equipment in question. The congestion income received before 1 January 2016 was recognised in turnover. EUR 219.1 million in congestion revenue remains unused and will be used for future investments to improve the functioning of the electricity market.

Congestion income, €1,000	2020	2019
Congestion income on 1 Jan	72,378	1,292
Accumulated congestion income	146,748	73,001
Investments matching congestion income		-1,915
Congestion income on 31 Dec	219,126	72,378

Countertrade

In terms of the costs arising from countertrade used to safeguard system security in grid operations, congestion income may be used to offset countertrade costs arising from cross-border transmission connections.

Counter trade, €1,000	2020	2019
Countertrade between Finland and Sweden	91	137
Countertrade between Finland and Estonia	226	485
Countertrade between Finland's internal connections	370	279
Total counter-trade	687	902

35. EMISSION RIGHTS

Fingrid has not been granted free-of-charge emission rights for the emissions trade period 2013–2020.
The use of emission rights had no impact on the financial result in 2020.

	2020	2019
Total CO ₂ emissions tCO ₂	5,020	5,142

36. PERMANENT LOCATION IN DENMARK IN INCOME TAXATION

Joint Nordic operational planning organisation

Fingrid has established, jointly with Svenska Kraftnät, Statnett and Energinet.dk, the Nordic Regional Security Coordinator (Nordic RSC) in Copenhagen for inter-TSO operational planning between the countries. The unit includes Fingrid employees who provide the service for Fingrid's parent company, and this operation constitutes a permanent location in terms of income taxation and is income taxable to Denmark. The unit became operational in summer 2018.
